

10+2 Importer Security Filing System Features

Web-based – TRG Direct is completely Web-based. There is no expensive software to purchase or download and no need to engage your IT department.

Templates Save Time – TRG Direct has a template feature (at no additional charge) for repetitive entries, so if your transactions from certain suppliers are always the same you can simply choose that template. Don't waste time keying in information that is already in the system. TRG Direct customers find this be one of the greatest tools in our system and take full advantage of this feature.

Standalone Application – TRG Direct does not require ISF filers to also file their consumption entries. In fact, most of our ISF customers begin filing ISF only and then move to direct filing of their consumption entries after they learn how easy the system is.

ISF & Consumption Entry – Choose to file both your ISF and consumption entries with TRG Direct and save more time on your consumption entry. Many of the elements required in the ISF are also required in the consumption entry. Once you enter your ISF the same fields in the consumption entry are pre-populated with the data from the ISF.

ISF Field Population – As you are provided with information for your ISF you have the ability to start the entry, save the data and come back to finish it and transmit later. Once an entry has all of the information that is needed you can hit transmit earlier than allowed (24 hours prior to vessel lading) and it will sit in a queue and transmit itself to U.S. Customs at the appropriate time.

Multiple Users – Your account will allow you to set up multiple users and manage each user's privileges.

Standard	Standard Rights gives all ISF privileges to the user. This is recommended only for users within your organization.
Limited	Limited Rights allows you to specify which ISF tasks the user is authorized to do. This role is only recommended for users within your organization.
*ISF Only	The ISF Only role is intended for users OUTSIDE of your organization who intend to allow to enter ISF data on your behalf. This user will not have permission to enter any part of the system except ISF.
None	The User will not have access to the ISF module.

***Vendor Access** – With TRG Direct you can provide access to your overseas vendors where they can populate their information on your behalf.

Search - The search screen allows you search ISFs previously filed in the system by Reference, ISF #, by Carrier or by Container.

Edit an ISF – After an ISF has been submitted you may need to return to that entry to correct information if you are notified of changes with your entry. TRG Direct allows you to simply edit and retransmit an ISF at no additional charge to that initial filing. You are only billed once no matter how many changes are made.
