

Release 11.0 Highlights

Release 11.0 Is Here.

For three decades, Slingshot's business management solutions have helped enterprises like yours achieve the next level of growth, efficiency and profitability. Release 11 continues that tradition, featuring major enhancements to the Enterprise Business Suite. The highlights:

New AJAX-Based User Interface (UI) for All Applications

The newly introduced AJAX client creates a more dynamic end user experience. A radical reduction in the size of HTML transferred from servers to the client side greatly improves application speed and overall performance. Our redesigned and re-skinned UI improves both the usability and the look and feel of the system. Enhancements include:

- Increased and more efficient use of space in the form area
- Ability to resize browser windows horizontally
- Role switching available on all forms; Current user visible on all forms
- A new button bar, housing all action buttons in one location
- Unified iconography for all major functions (Post, Send, etc.)

75+ Functional Application Enhancements

We continuously partner with our customers to evolve and improve our applications based on their input. We are good listeners. Release 11 includes 76 enhancements, making Slingshot applications more feature-rich and functional than ever before. Here is a list of a few of our favorites:

- PostgreSQL DBMS is now supported natively by the Slingshot framework
- Alerts are now the subject of span-of-control
- New inventory detail report allows users to group details by stock, warehouse, or location
- Billing documents can now be filtered by type in financial applications
- Spend analysis added to Requisition Management application
- Support added for handling and managing hazardous materials
- Serial/lot audit report enhanced to show quantities
- Sourcing option 'Buy-to-Order' seamlessly links a sales order line item with supplier quotes

Expanded Workflow Infrastructure

We've enhanced our workflow infrastructure to include all objects in the system. To put it simply: anything in the system can now become the subject of a workflow. This allows you to:

- Perform common tasks quickly and accurately
- Automate controls, improving efficiency and increasing regulatory compliance
- Formalize and sequence business processes. Enforce and document review and approval.
