Came, saw, conquered.

results of the successful test concluded 21:30 est
on June 1st, 2000:

**VOFDM Wireless test from client to headend (1.5 miles)
and then satellite uplink to Oxford CT. and out to Sprint ISP.
VOFDM test latency results:**

ping from headend downstream to client -16ms

ping from client to headend - 32ms

ping from VOFDM client up through satellite link and down to Oxford ct and out

sprint ISP to Internet address - 4.1.1.1 (Compaq computer corp.) website - 560 ms

Much thanks to Cisco wireless BU and in particular Noor Ali and Amos Gregory for their help, and also the great Satellite expertise of Howie DeFelice with Petrex International.

thanks,
don
