

CAMEyeO, Inc. partners with PG Dating, one of the most popular online dating site software companies.

Buffalo Grove, IL (PRWEB) November 17, 2009 - CAMEyeO, Inc. has partnered with PG Dating for integration of 'faCetalk Online' embedded into PG Dating Pro.

The PG Dating Pro 'faCetalk Online' module will be available for purchase at the end of November 2009 from here.: <http://www.datingpro.com/dating/>

CAMEyeO, Inc. has built a niche by providing a packaged feature for online dating software companies. This feature is a web service that provides a scheduled, anonymous, secure, and embedded online video date. In addition, CAMEyeO, Inc. provides the integration services needed to embed their product into any online dating software platform.

Elena Kolyasnikova, Product Manager of PG Dating, says of the 'faCetalk Online' app, "Your product allows users to make an appointment. That's cool. No one else has this. You have a neat system."

Dan Wellisch, CEO, of CAMEyeO, Inc. says of PG Dating, "PG Dating Pro is an excellent dating software platform. It has been very easy to work with."

CAMEyeO is continuously looking for more partners like PG Dating in the online dating software space. Other recent integrations that CAMEyeO has deployed are for BoonEx and osDate platforms. More detailed information including featured customers are found here.: <http://www.cameyeo.com/in-the-news>

Furthermore, CAMEyeO is also trying to search for and evaluate new markets, outside of online dating, where an anonymous, scheduled, secure, and embedded video conference service makes sense.

So how does 'faCetalk Online' work?

Members (of the dating website) schedule their online video session **with someone they have already met online** using the anonymous communication services (e.g. anonymous email) of that site. **Anonymous** scheduled email reminders are sent to both daters to remind them of their 'faCetalk Online' **scheduled** date. At the time of the date, each user follows the link inside of a reminder email, bringing each party back to the dating website and to the **private** video page on that site. The service is embedded into the dating site such that members always stay on that dating website while using the service.

Using 'faCetalk Online', members meet virtually face-to-face and can answer such questions for themselves as "Does that person look like the picture they posted in their profile?" or "Does that person smile a lot, have fun, and seem to enjoy life?"

Dating members can also pay attention to important non-verbal communication, signaling

whether they should meet that person offline or not.

'faCetalk Online' has been nominated for the "Best New Technology" award at the iDate Conference to be held in Miami in January 2010. iDate (<http://mb.internetdatingconference.com/>) is the business conference for the online dating industry.

Dan Wellisch, CEO of CAMEyeO, Inc and Robert Lee of aLoveLinksPlus have partnered to bring the new 'faCetalk Online' video dating application to market.

Dan Wellisch says of the 'faCetalk Online' app, "Our product is for use by members of an online dating site, yet our website and support is targeted towards online dating site webmasters. Our focus is to make it as easy as possible for webmasters to add such a desirable feature into an already-existing online dating site. We are a web service providing a value-add so that customers can differentiate their online dating site from the rest of the pack."

Robert Lee adds, "The 'faCetalk Online' app is a great way for current dating service owners to add a wonderful video dating feature to their dating service for low or no cost, and really move up the ladder of competition to take on larger dating services that do not offer this type of service currently to their members. Access to 'faCetalk Online' is managed completely by the online dating service that embeds it and will add an additional depth of offered services to every dating service that uses it."

'faCetalk Online' is available as a customized widget (no advertising) OR as the free ad-supported version. Both are ready-to-go for installation today.

About the [CAMEyeO, Inc.](#) management:
