

About Netsweeper

Netsweeper Inc. is a leading provider of Internet content filtering solutions and services for businesses, educational institutions, government organizations, service providers and OEM partners around the world. Netsweeper's solutions supply IT managers the tools necessary to optimize network security while providing all users with a positive, productive and safe Internet experience.

Best known for our real-time web page categorization technology, Netsweeper's solution incorporates the search activities and patterns of its entire user community. With millions of web pages being posted each day, this artificial intelligence engine has the capacity to keep pace with the massive growth of the Internet and its content. As a result of this industry leading technology, Netsweeper has accrued and strategically categorized over 3 billion URLs and receive requests for approximately 10 million new URLs every day.

Netsweeper Inc. is headquartered in Canada's technology triangle just minutes west of Toronto, ON, and has offices in UK, India and Australia with additional distributors in The United States, Middle East, and South American. Founded in 1999 and privately held, Netsweeper has enjoyed consistent growth and profitability while building a client focused and professional team that serves a global customer based with over 40 million end users.

Netsweeper Solutions

A fast and secure network is considered a must have in today's world. IT administrators are tasked to deliver on this requirement as the use of network and Internet resources is now common practice.

Netsweeper provides Internet content filtering and web threat management solutions that will monitor, audit, filter, and report on Internet usage within any organisation while also protecting networks and workstations from web-borne threats. Whether you are looking to protect students in a school setting, manage or monitor employees at work, or implement a filtering service within a Telco or ISP network, Netsweeper has the solution that puts network management and control in the hands of the IT administrators.

Deploying a Netsweeper solution is simple. Possessing over a decade of experience in the business, Netsweeper will provide best practice suggestions for implementing your unique situation. Whether you envision a single global policy for your entire user population or prefer to monitor and filter on a per user basis, Netsweeper can address your requirements. Further, to maximise your return on investment, Netsweeper can provide a hosted filtering service to get you started without the heavy start-up costs. As your requirements change, an appliance can be provided that will let you take ownership of the equipment you need to filter your network.

Implementing a Netsweeper solution will provide:

- Protection against viruses, spyware, and other malicious applications
- Filtering of content to enforce acceptable Internet use – protecting children or managing employee productivity
- Management of bandwidth which will reduce overall network costs while promoting efficient network performance
- Reduced legal liability risk by monitoring appropriate network use
- A flexible administrative tool that puts the control and management of Internet site access in the hands of the delegated administrative staff
- Filtering of laptop users off network with the installation of client filters where necessary

When you partner with Netsweeper, you will receive a top-notch solution that works, at a very competitive price, which is supported by a dedicated team of professionals, guaranteed to provide you with the utmost in customer service.
