FileCatalyst DIRECT

It's time to replace FTP

Moving files is a critical process for your organization. FTP can be slow and unreliable, a combination that causes lost productivity and frustration. International file transfers are particularly problematic, frequently disconnecting and almost never reaching full line speed. Predictability and guaranteed delivery are virtually impossible with FTP.

FTP was born in the 70s. Are you still using it? Seriously? Maximize file transfer speeds with FileCatalyst.

Transfer files up to 100X faster with FileCatalyst Direct

FileCatalyst Direct provides a software-only file transfer solution which provides acceleration, security, and retry/resume facilities to ensure delivery. FileCatalyst technology creates a connection that is immune to poor network conditions, resulting in transfers that are up to 100X faster (or more) than FTP.

FileCatalyst®
reinventing file transfer

FileCatalyst Application Suite

Pick and choose from the full range of FileCatalyst client applications. Create automated processes with HotFolder, build web applications with our Java applets, empower existing scripts with the Command-Line Interface, distribute a familiar FTP client-like interface, or even build a custom application with our API.

FileCatalyst Direct includes a tool for centralized management, using an identical interface to the server application. For the Enterprise, the Monitoring Agent continually checks on the status of the FileCatalyst Server, sending email notifications or SNMP traps to notify administrators if any issues should arise.

During your free trial, our team will help identify which applications will best meet your needs.

FileCatalyst
DIRECT

- Reclaim your bandwidth and transfer at full line speed
- Send and receive files up to 100X faster than FTP
- Use our suite of applications to empower any transfer scenario
- Manage connections and bandwidth usage
- Guarantee and prioritize file delivery
- Software-only solution; no hardware upgrades
- Deltas features allows huge files to be updated with partials
- Meet security mandates like HIPPA, SOX and GLB with SSL and AES
- Authenticate with existing LDAP or Active Directory
- Cross-platform architecture for any server/client deployment
- Server-based license with unlimited client application distribution
- Be notified of events by email or SNMP

FileCatalyst Direct provides the tools you need to enhance or create a managed and accelerated file transfer solution
