WebLOQ Recognized By SC Magazine As 'Innovator' for 2009

LOQMail Selected for Data Protection: Email Security

Monterey, Calif. – December 22, 2009 – WebLOQ, Inc., a leader in privacy solutions for secure and compliant business communications, today announced it has been recognized by leading IT security magazine, *SC Magazine*, as an industry innovator for 2009. WebLOQ was selected as an "Industry Innovator" for Email Security with its new product LOQMail. A free version of LOQMail is available for download at www.LOQMail.com.

"WebLOQ has applied an interesting technology to offer an innovative solution to multiple email challenges - some operational, some technical and some legal," commented Peter Stephenson, Technology Editor at *SC Magazine*. "But, at the end of the day, there is a hard problem with securing email. WebLOQ is innovative in recognizing and solving the problem of securing email transactions while complying with regulatory requirements and giving users an easy-to-use product."

LOQMail is ideal for both individuals and businesses that want to transmit personal information, sensitive data and confidential materials securely to comply with growing national and state privacy regulation.

"People and companies are just starting to recognize that sending an email using the open internet protocols is like sending a postcard where there is the possibility of the contents being read at multiple stops along the way. This can jeopardize personal information, make individuals susceptible to fraud, and expose companies to legal issues if not complying with industry policies or the encrypted email requirements for regulations such as HIPAA, GLBA, Sarbanes-Oxley and others," said Neal Smith, CEO at WebLOQ. "We are honored to be recognized by SC Magazine, a longstanding leader for IT security professionals, whose editors understood the valuable combination of an easy-to-use, easy-to deploy email security product that also meets the needs for regulatory compliance."

With a simple download into the individual's preferred email client (Outlook, Thunderbird, Windows Mail, Mail, etc.), LOQMail integrates directly into email as a new private communications channel. The LOQMail account, such as NAME@loqmail.secure, sends only to other LOQMail users to ensure that sensitive email, documents and personal information are delivered and received only by the intended recipients. LOQMail provides state of the art double-encryption to the entire email, including the subject line, email body, attachments and recipient details. LOQMail messages are transmitted over WebLOQ's private network of domains that are not subject to spam, phishing and other malware.

About WebLOQ

WebLOQ enables secure, private and compliant electronic communications. Combining revolutionary technology with unrivaled ease-of-use, WebLOQ's suite of LOQMail solutions simply integrate directly into users' email to provide a trusted communications channel to ensure that sensitive email, documents and personal information are delivered and received only by the intended recipients. Emails sent via LOQMail are protected with state of the art double-encryption and are transmitted over WebLOQ's private network of domains that are not subject to spam, phishing, and malware for comprehensive security. Its flagship products include auditable reports that trace delivery confirmations with an individual tracking number to easily demonstrate compliance to regulators and facilitate eDiscovery.

LOQMail is successfully helping organizations across financial services, insurance, healthcare, legal, accounting, government, defense and law enforcement gain the cost savings and efficiencies of email, while making sure that correspondences are compliant with growing national and state privacy regulation. WebLOQ is headquartered in Monterey, CA and more information is available at www.webloq.com , or by calling (888) 815-0008.
