

Consonus SAFE™

Remotely Managed Email Archiving Service

Solution Overview

Part of Consonus' suite of managed data protection solutions, Secure Archiving for the Enterprise (SAFE™) is a remotely hosted and managed intelligent e-mail and file archiving solution designed to store, manage, and locate corporate data. Our SAFE™ solution can greatly reduce storage costs, improving end-user service levels and simplifying administration of your corporate messaging systems.

Customer E-mail System Challenges

As e-mail is a critical application for every business, we see customers struggle with:

- Ever increasing storage costs across the enterprise, particularly with e-mail.
- Security risks due to the increase of PST files throughout the organization.
- Large e-mail files creating bottlenecks with both the backup and recovery of mission-critical information.
- Costly and cumbersome management of complex mailbox structures, leading to much lower end-user satisfaction, while detracting from other high-priority tasks.
- High costs (and often low compliance) associated with corporate policies for information retention and deletion at the departmental and end-user levels.
- In the event of impending lawsuits, speed of legal discovery is hampered by the initial collection of data and the high cost of legal fees to perform detailed data review.

Solution Benefits

SAFE™ readily addresses each of these challenges while providing the following benefits:

- Lower capital expenses through optimized storage consumption, with better data compression, offloading of data to lower cost storage tiers, and reduced backup volumes and windows.
- Faster recovery in the event of a disaster through smaller data units, with no extraneous e-mail stores on individual desktops.
- Simplified, reduced cost of mailbox management, freeing users from quota constraints.
- Strong support for legal and compliance requirements.

A Partner You Can Trust

With SAFE™, you will benefit from the world's leading e-mail archiving solution as reported by Gartner, Forrester and IDC. In fact, Symantec's Enterprise Vault™ is the *only* product to be listed in Gartner's Leaders Quadrant, an honor it has held for five consecutive years.

Consonus has been a Symantec Platinum partner since 1996 and is Symantec's largest Platinum and Support (TSPP) provider in North America. We hold proven expertise in solution strategy, design, and delivery across heterogeneous environments, helping companies to assure the security, availability, and integrity of their information. Consonus is a true leader in providing remotely managed data protection offerings.

Join the hundreds of satisfied customers who have benefitted from the solid Consonus and Symantec partnership—leveraging both companies' competencies and experience to employ a highly credible, expertly managed solution.

The Value of Archiving as a Service

Our remotely managed, fully hosted SAFE™ solution offers these additional benefits:

- Quickly realized value due to high-speed provisioning.
- Simplicity - *You* set the policies around your e-mail system, and we do the rest, allowing your staff to work on other strategic business initiatives.
- An improved economic model, including little to no up-front capital investment and pay-as-you-go software, storage and services.
- Rapid scalability in terms of number of mailboxes, volume of data, and additional services required.
- Assurance that e-mail archives are housed and protected in Tier III and IV, SAS 70-compliant data centers.

About Us

Consonus is an IT solutions provider of Data Centers, IT Consulting and Infrastructure, and Managed Services. Our comprehensive suite of IT services and solutions, combined with our highly secure and reliable data centers, allows us to address our customers' critical needs of data protection, disaster recovery, and virtualization.
