

Microinput is strategically located to meet our clients' evolving needs for Adobe-certified consultants with cost-effective expertise. Operating in the North American and European markets, we maintain regional offices on those continents that capitalize on geopolitical cost advantages to lower client cost without sacrificing quality and productivity. Every team member is native to our markets, immersed in those cultures, and fluent in multiple languages, including in every case, English.

Our status as an Adobe Solution Partner extends worldwide to provide our client projects with the full technical and product support of the Adobe Customer Support organization. Microinput can ensure powerful Adobe solutions are installed and configured according to published best practices, and our certified consultants take advantage of every feature and function of those tools to rapidly develop stable, consistent project deliverables.

Microinput Right-Sourced services apply the most competent Adobe-trained personnel when, and for as long as, needed, and at a cost that establishes the industry standard. Our disciplined project methodology is monitored for key performance indicators of quality, on time delivery, and problem resolution. Our account and project managers are trained to establish and maintain clear and frequent communication channels. With Microinput, outsourcing not only saves cost, it is an effective way for organizations to meet strategic business objectives and effect innovation.

Every client engagement begins with an assessment interview, during which our consultants learn your business strategy and operational objectives to develop an effective Adobe solution as appropriate. The assigned Microinput project team is then mapped to project deliverables, and cost and timeline estimates are confirmed. Our project managers are proficient at delivering clearly defined projects on time and on budget.

Microinput Off-Shore Adobe Services include:

- Adobe LiveCycle ES
- Adobe Flex
- Adobe Technical Support
- Adobe Authorized Training Center

With Microinput, clients receive:

Accountability

The Microinput Project Manager is the client's single point of accountability for all project deliverables. An established escalation process applies senior management authority as required. Projects can be managed by local, on-site personnel.

Stability

By applying solid best practices and using US- and Canadian-based managed delivery infrastructure, Microinput provides secure, stable solutions with reduced risk that ensures the continual operation of our clients' applications.

Flexibility

Microinput solutions and resources are available on demand to provide clients tremendous flexibility in their business practices to meet changing business requirements.

Predictability

We ensure consistent high-quality performance using best practices in our development processes, project disciplines, implementation methodologies, and management transparency.

Responsiveness

Support services are delivered to established SLAs that can be tailored for any requirement to ensure that Microinput resources are available to the client when and where needed.

Cost Effectiveness

Our Right-Sourced personnel and facilities, and the resulting cost structure advantages, create ROI that enables desired projects to proceed.
