SIMPLEGRID IT SERVICES

**Simplegrid™ provides
the highest quality
technology solutions
and professional service
at an exceptional value
to our clients.**

Professional Services

Understanding technology is a critical part of our business and is second only to understanding the specific needs and requirements for your organization. Our team consists of experienced IT professionals who can provide system design, implementation, training, project management and deployment services. Our specialized practices deliver expert technology guidance for a variety of technical disciplines which include: core infrastructure, server and desktop virtualization, storage area networking, desktop architecture and deployment, disaster recovery and data center consolidation.

Managed Services

Today's businesses require healthy IT systems and we strive for operational excellence and maximum efficiency for our client's systems. Our dedicated IT services engineers provide 24x7 support and remediation, proactive maintenance, on-site service and emergency support. Your business can rely on our Managed Services which include: remote infrastructure and desktop management, outsourced user support, prepaid block hours and on-call IT support.

Advisory Services

Our clients understand the value in making smart strategic decisions to maximize IT investments and avoid costly mistakes. Our experience allows us to provide c-level guidance to ensure a sound and predictable IT vision. Simplegrid Advisory Services include: strategic planning, vendor selection and interim technology management.

Speak with us today to get started, it's easy! No cost assessments and consultations are available.

SIMPLEGRID EXPERIENCE

Our formula for shared success is easy to understand and, true to our name, is quite simple; we enjoy our work and are dedicated to helping our clients. Simplegrid provides the highest quality technology solutions and professional service at an exceptional value to our clients.

TECHNOLOGY DIRECTION YOU CAN TRUST

Our knowledgeable staff understands that providing both business and technology perspectives on the solutions we develop are required for long term success. We are driven by a pursuit of excellence and are passionate about presenting the best strategies to our clients. Providing more than just strategic direction, our staff helps with complex engineering, implementation and support for information technology systems we design.

EXPERIENCE MATTERS

Multi-vendor certification and ongoing training keeps our staff fluent on the latest tools and technology. This depth of experience and our own technology best practices benefit our clients. We innovate by keeping close association with the leading technology vendors, maintaining an aggressive research program, and constantly striving to exceed our clients' expectations.

Our services include the following:

- Network Design and Implementation
- Datacenter Consolidation and Design
- Desktop and Application Deployment
- Server and Desktop Virtualization
- Email and Messaging Infrastructure
- Storage Area Networking
- Technology Assessments
- Strategic Technology Planning
- IT Management
- Project Management
- Support Services
- Disaster Recovery and Business Continuity

Our goal is to make your life easier by developing and implementing the business and technology solutions that help you run your business in the best way possible.

PROVEN PARTNERSHIPS

Aligned with the very best technology vendors to provide your organization with reliable technology it can depend on.
