Announcing A Strategic Partnership to Drive Open, Sustainable Smart Grid Solutions

MAGPIE TI, Denver, CO – February 8, 2010 - Magpie TI, a Colorado-based provider of software engineering services, and Green Energy Corporation, leading the global transformation of electric grids, is pleased to announce a strategic software development partnership. The partnership brings together top smart energy and software engineering experience and combines the common vision of the two companies to deliver solutions for power systems that are secure and sustainable.

"As we move towards our goal to replace legacy systems with open solutions, we sought out engineering partners who understood the unique challenges we face in creating open source solutions based upon emerging standards," says Peter Gregory, CEO Green Energy Corp. "Magpie's experience in the transformational period of the telecommunication industry provides a strategic advantage in Smart Energy and is ideally suited to Green Energy's development strategy."

The partnership commences as Green Energy executes a multi-step plan to create industry user groups and advance standards that promote open, vendor-independent solutions. Magpie software engineers will collaborate with Green Energy's industry technologists to architect requirements for security, scalability and robustness. The development efforts will deliver solutions founded upon a plug-and-play approach for new solid state power equipment.

 "This partnership is an ideal marriage of industry and engineering expertise," according to Margaret Burd, CEO Magpie TI. "Our passion is to develop meaningful software solutions – which is why we've focused on building our Smart Energy expertise and fostering strategic relationships with leaders like Green Energy."

About Magpie

Magpie is a leading provider of software engineering services and is widely recognized for in-depth technical skills, proven experience and customer-centric values. Magpie engineers engage as a trusted extension of engineering teams in small and large companies that span a wide range of industries including communications, smart energy and healthcare. Magpie provides services to develop software that meet customer requirements for presentation, firmware, application

services, network management systems and communications solutions. Magpie delivers quality results when companies want to accelerate their ability to deliver new functionality, leverage rare expertise or meet market-driven demand. For more information, visit www.magpieti.com.

About Green Energy Corporation

Green Energy Corporation (GEC) is based in Colorado and focused on providing smart grid technology solutions and services to the global utility industry. GEC has successfully designed, built and deployed engineering and software solutions for major electric utilities, governmental agencies, and engineering/procurement/construction (EPC) contractors. For additional information, visit www.greenenergycorp.com or contact dennis.murphy@greenenergycorp.com.
