

How you can help change lives!

To continue its mission, Kids Mobility Network requires financial resources. You can help the children served by the organization in a number of ways:

► **Donate to Kids Mobility Network**

► **Share your resources:**

Help us connect with charitable businesses & individuals

Refer us to your media contacts

Help us connect with public figures or celebrities you may know

For every dollar donated to Kids Mobility Network, the Organization creates approximately \$6 of community benefit for children with disabilities.

situation

Children with physical disabilities have a unique, recurring need for **durable medical equipment** ("DME") such as wheelchairs, walkers and other equipment. Due to their rapid growth, existing DME becomes ineffective in meeting their needs and hinders their ability to effectively participate in their community. All families must replace outgrown shoes and clothing, special needs families must replace new DME – at great expense.

A child's manual wheelchair costs an average of \$3,500 and sometimes more than \$7,500.

solution

Kids Mobility Network, a 501(c)3, non-profit organization, is like no other non-profit organization. It provides a resource for children with disabilities and their families to obtain DME. Kids Mobility Network gathers outgrown DME and reconditions the equipment. Reconditioned DME is then matched to a child's specific needs - just like new equipment.

For uninsured or underinsured families, new DME is financially out of reach. Kids Mobility Network serves as an alternative to traditional channels to provide DME to children so they have the same access to their communities as every other child.

community benefit

Since its first equipment placement in 2006, Kids Mobility Network has provided hundreds of children with DME. Durable Medical Equipment is critical to the social and physical development of a child. Appropriate DME allows a child to interact effectively with his/her peers and develop interpersonal skills, self confidence and self-esteem.

It's less about the equipment and more about the benefit that the equipment provides a child.
