

## Job scheduling and navigation

What would one more job per driver, per day mean to your bottom line?

Leverage the powerful combination of **MyNavtrak fleet management software** and **Garmin® personal navigation devices** to better understand your daily operation and maximize the profitability of every field worker.

Once your drivers have completed about 6.5 hours in their work day, and their overhead costs (*salary, vehicle, job-related expenses*) are covered, any jobs completed afterward mean **pure profit**. Navtrak is committed to providing the right tools to make sure your drivers reach this “magic hour” every chance they get.

Our online, “anywhere, anytime,” fleet management/GPS tracking software now offers an easy to use, powerful set of job scheduling features and personal navigation devices (PNDs) from Garmin®, to help your drivers reach those extra jobs.

The combined technologies of Navtrak and Garmin enable you to:

- Create job schedules for every driver in your fleet
- Send jobs to Garmin PNDs for more efficient routing
- Review daily job lists and make changes/re-route drivers on the fly
- Provide voice-activated turn-by-turn directions to each job/delivery
- Send and receive messages to and from drivers in the field
- Generate driver activity reports associated with each job
- Maximize the amount of jobs/deliveries each driver can get to

For a more detailed tour of Navtrak’s job scheduling and navigation features, go to [www.navtrak.net/jobs](http://www.navtrak.net/jobs).
