

Mossquito is an Integrated Development Environment for SharePoint designed to boost your SharePoint business. Our innovative approach to SharePoint application development unleashes new possibilities for delivering SharePoint solutions faster and with predictable results.

Develop with confidence backed by years of SharePoint experience condensed into an easy-to-use tool. Get the Mossquito advantage regardless of whether you are starting a new project or in the middle of your development process.

Benefits FOR MY BUSINESS

- ✓ Better SharePoint governance
- ✓ Reliable deployments
- ✓ Maintainable applications
- ✓ Predictable results
- ✓ Faster time to market

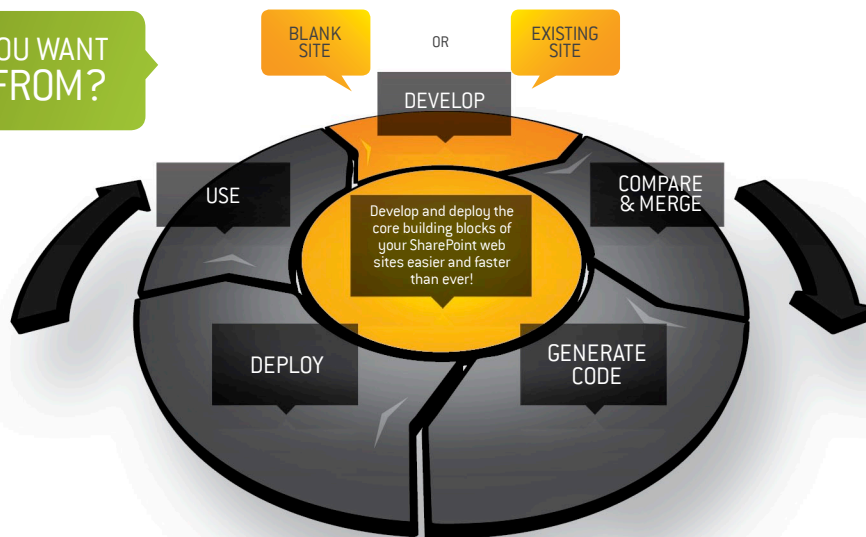

Benefits FOR DEVELOPERS

- ✓ Design data models hassle-free and fast
- ✓ Inspect, modify, or refactor every aspect
- ✓ Compare > Merge > Deploy
- ✓ Bind your business logic seamlessly
- ✓ Organize and keep track of your work

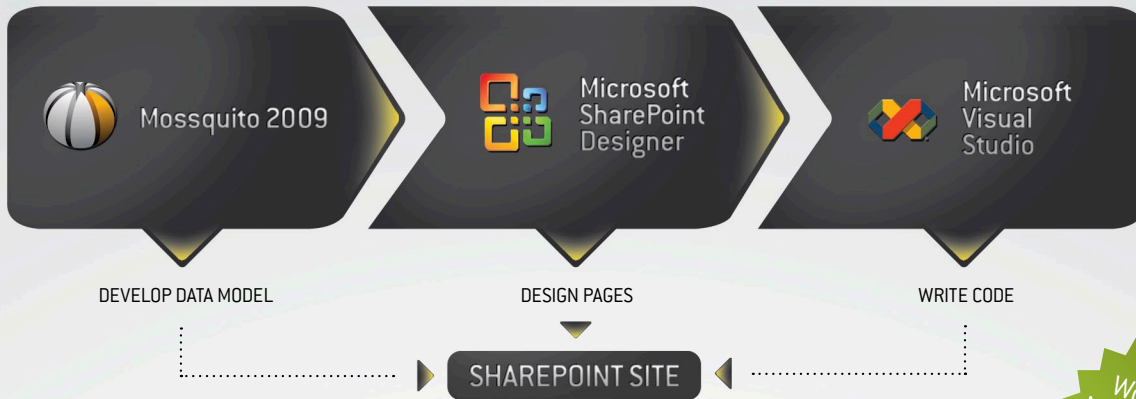

Benefits FOR IT PROS

- ✓ Visualize web site metadata
- ✓ Identify differences and fix problems
- ✓ Synchronize across web sites and farms
- ✓ Streamline your staging process
- ✓ Support users more efficiently

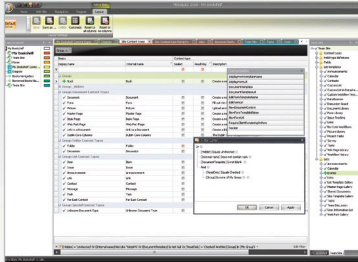

WHERE DO YOU WANT TO START FROM?

DEVELOP	COMPARE & MERGE	GENERATE CODE	DEPLOY	USE
Mossquito lets you design and fully modify lists, content types, site columns, views, navigations and more — right when you need it. Advanced editors, inspection and refactoring tools help you achieve your goals faster.	With our Compare & Merge engine you can inspect and evaluate changes made to data models at any time during the development process — exactly the same way you are used to comparing source code or file system folders.	To work with your data from code — whether C# or VB — use the DAO generator to instantly create an extensible and customizable Data Access Layer for your solution. Then go to Visual Studio and write the business logic.	When you feel your work is done, press Deploy and the changes made to the data model will be published to a SharePoint web site of your choice. Get your deployments under control with our Compare & Merge engine and variety of deployment modes	Don't be afraid to let users make changes. Even upgrades of complex solutions will be a piece of cake once you start leveraging the benefits of Mossquito's unique approach to design and deployment of SharePoint web sites.

Works with
MOSS 2007
WSS 3.0

OBJECT TREES AND GRIDS

Embrace all aspects of SharePoint data models. Browse, filter, sort and group objects using customizable grids and trees.

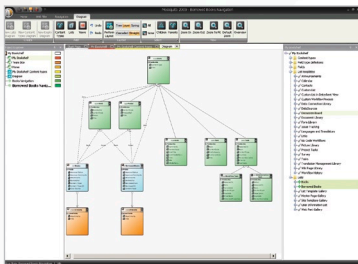

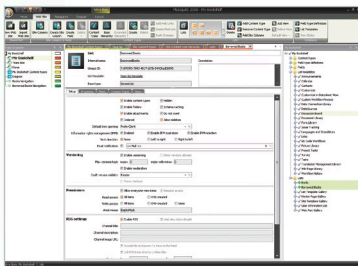

DIAGRAM DESIGNER

Visualize and design complex data models with just a few mouse clicks. You are free to choose the way you like to work.

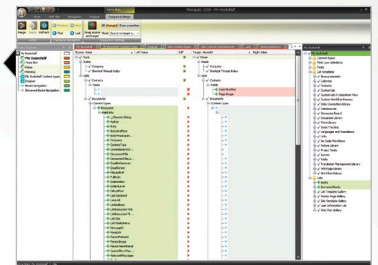

OBJECT EDITORS

Enjoy full access to all available SharePoint properties. Tweak anything without the need to write a single line of code. Let Mossquito guide and validate your steps.

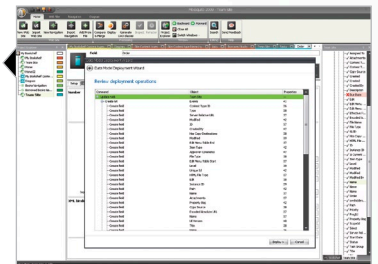

ADVANCED COMPARE & MERGE

Compare any two sites to reveal and inspect all changes down to the property level. Merge changes between data models, reuse assets and facilitate team work.

DEPLOYMENT ENGINE

Experience hassle-free and reliable deployments thanks to our innovative approach leveraging SharePoint's .NET APIs together with our Compare & Merge engine.

ENJOY YOUR SHAREPOINT WORK EVEN MORE:

- ✓ Leverage comprehensive support for lists, content types, site columns, fields, views, navigations and more
- ✓ Connect to as many remote SharePoint farms as you can handle
- ✓ Work off-line from your desktop Windows operating system
- ✓ Generate Data Access Object classes and work with content from code in a type-safe manner
- ✓ Automate your tasks with a command line interface providing all major functions
- ✓ Save your data into any revision control system such as TFS or Subversion

SYSTEM REQUIREMENTS

- Windows Server 2003 or 2008
- Microsoft Office SharePoint Server 2007 or Windows SharePoint Services 3.0
- Windows XP / Vista / 7 to work from a desktop machine

SHAREPOINT 2010 SUPPORT COMING IN 2010 H1!
