Ensure secure, real-time protection of your source code.
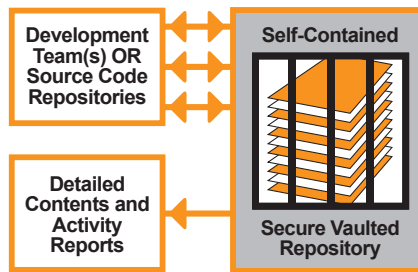

Chaperon Secure™ Vaulted Source Code Repository

The Chaperon Secure™ Vaulted Source Code Repository (CSVSCR), a joint development project with SourceHosting.net, allows owners of source code Intellectual Property (IP) to securely set up a central or distributed repository that can be updated regularly and in real time. This solution is ideal for companies that rely on distributed and/or outsourced software development teams, but insist on the highest level of protection for their source code IP. Contents of the repository cannot be accessed, copied, viewed, and/or downloaded without express authorization from the owner. The source code owner can cloak or un-cloak the centralized or distributed source code repositories to control access to their source code. The source code owners also receive detailed content and activity reports, offering an accurate, up-to-date view of repository contents.

This unique, patent-pending technology can be easily deployed, moved, duplicated and archived as business conditions dictate.

Product Features

- Self-contained virtual appliance enables deployment on a variety of hardware and operating systems.
- Detailed content and activity reports give an accurate picture of all activity.
- Version control features keep track of what has changed and when it was changed.
- Repositories may be cloaked or un-cloaked.
- Integrates seamlessly with all operating environment and hardware platforms without impact to end-users.
- Transparent to end users.
- No special tools required to access and interact with the IP.
- Also ideal for archived and/or non-active projects.

What it means to you

- Centralized and distributed Source Code Intellectual Property (IP) is protected and secure at all times.
- Your Internet workgroup or technical team can share and manage project source code seamlessly -- regardless of where each team member is physically located.
- Source code in the repository is active and up to date.
- The technology is scalable to meet growing enterprise requirements.
- You have the ability to rapidly recovery source code in case of disaster.
- You can consolidate your source code IP from multiple locations into one.

Chaperon, LLC offers a unique portfolio of technology solutions that protects and manages source code Intellectual Property (IP) at every stage of the software development life cycle (SDLC) – no matter where it travels or who is working on it. Source code IP is protected from creation and transport to storage and retrieval whether it remains in-house, is outsourced, or sent offshore. Chaperon's patent-pending technologies enable any business to safeguard the information that is vital to its survival and competitive viability while lowering security costs, enjoying the benefits of a flexible workforce, and taking advantage of worldwide labor pools without the risks.
