

DataCentre upgrade and consolidation gives Datashare Solutions room to grow

Datashare Solutions has recently completed a major upgrade to its head-office DataCentre in Surrey, investing in new hardware and consolidating its IT systems as a platform for continued business growth. Managing Director John Eady sees these improvements as key to the ongoing provision of quality managed IT services and unsurpassed levels of customer care.

“Massive hardware investments in our DataCentre ensure we can provide the most secure and reliable managed IT services for our clients. Effective [disaster recovery](#) is vital for business continuity in law firms, accounting practices... any business that holds vulnerable data. The consolidation of our IT systems means we can continue to deliver, time and again for our customers, apace with business growth,” he says.

“Consolidated, highly efficient IT systems reduce our costs, increase capacity and improve reliability. We are constantly looking to raise the bar with our ISO27001 Managed IT Services, [disaster recovery and business continuity](#) services,” he adds.

Organisations demand low costs and a world class service in information security, particularly those managing sensitive data, such as law firms and accounting firms. Datashare Solutions’ data recovery systems are fully compliant to ISO27001, demonstrating its commitment to the highest standards of information security

“Information security and effective [data recovery](#) is something that law firms, accounting start ups... really any business should take very seriously,” points out Eady. “As more and more organisations look to us for robust Managed IT Services, our improved DataCentre and consolidated systems inspire only greater confidence. “
