

# Corepoint Operations Monitor

“Corepoint Operations Monitor consolidates data from multiple systems into clear, graphical views to facilitate more informed decisions that can enhance daily and weekly performance for a healthcare organization.”

**John Griffith, CIO, EPIC Imaging**

## Better Informed. Better Decisions.

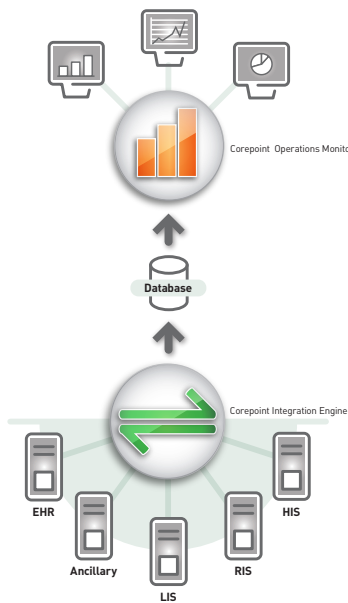

It can be challenging to get a clear day-to-day operational perspective of what is happening within an organization, department, or practice. Key metrics and timely insights are essential to making more informed decisions on patient flow and the overall health of operations.

### Gaining Operational Insights

Corepoint Operations Monitor is not a one dimensional dashboard. It delivers multi-dimensional views of your healthcare operations. Specifically, Corepoint Operations Monitor provides the capability to drill several layers deeper into your data and gain a better understanding of what is occurring within your workflows or departments.

Corepoint Operations Monitor offers several operational perspectives. Graphical perspectives include:

PERSPECTIVES ON PRODUCTIVITY	PERSPECTIVES ON PERFORMANCE	PERSPECTIVE ON PATIENTS
<ul style="list-style-type: none"> <li>Work RVUs</li> <li>Patient throughput</li> <li>Current and future workloads</li> </ul>	<ul style="list-style-type: none"> <li>Patient wait times</li> <li>Turnaround times</li> <li>Average length of stay</li> <li>Occupancy</li> </ul>	<ul style="list-style-type: none"> <li>Patient mix</li> <li>Referring physician and/or facility statistics</li> <li>Patient financial class information — Medicaid, Medicare, insured, uninsured, etc.</li> </ul>

### More Robust than a Dashboard. A Cost-Effective Alternative to BI Tools.

#### Communicating Clearly with Current Metrics

Corepoint Operations Monitor delivers up-to-the minute comparisons and trends of key operational data. The views are clear, graphical, and useful as you click to explore key information and gain further insights on your daily operations and workflows.

#### Information to Take Action

Corepoint Operations Monitor empowers department heads and operational managers to make more informed decisions by communicating current metrics and trends. The impact is timelier information to plan, act, and revise decisions and better align with the current operational picture.

With better information comes real results: improved costs savings, higher patient satisfaction, and a more robust operational model.

**Key Value**

Corepoint Operations Monitor delivers value for many healthcare organizations, departments, and practices by:

- Leveraging your data flow to new performance levels – gain a more complete operational picture in an up-to-the-minute, graphical manner
- Identifying areas of success and concern – modify operational plans as needed to gain the most from your organization
- Pinpointing possible bottleneck areas in workflow and taking action on the information

Anticipating problem areas with pertinent information and getting ahead of the curve on solving potential challenges

- Improving operations by gaining insights from relevant, recent data

**Access to Current Data — An Enabling Asset**

Within your organization, data is available in many disparate applications that may only provide a narrow glimpse of the operational data. However, it is not a complete operational picture — the data is locked within an application silo.

Corepoint Operations Monitor uses industry-leading integration technology to gather the data from various applications, store it, and deliver it in a consolidated view. With Corepoint Operations Monitor, your data is converted into an enabling asset — creating a more complete view of your operations and enabling timelier, more accurate decisions. The data silos are unlocked, and the information flows into meaningful, actionable views.

Getting the highest level of performance from your workflows is essential. Corepoint Operations Monitor facilitates gaining access to the information at the right time to make the right decisions.

**Key Features**

Corepoint Operations Monitor simplifies the complexities of analyzing data to make more informed and timely decisions. It is a cost-effective approach that creates meaningful analysis in daily and weekly decisions.

INTEGRATED DATA MODEL	TAILORED USER VIEWS	RELEVANT, ACCESSIBLE PERFORMANCE DATA
<ul style="list-style-type: none"> <li>▪ Gather current data from existing applications and the flow between them</li> <li>▪ Transform data into correct formats for defined data model</li> <li>▪ Build necessary rules and logic to access the data and display it correctly for viewing</li> <li>▪ Utilize defined operational perspectives — key information and performance metrics by organization, department, or location</li> <li>▪ Populate operational perspectives with current data from various workflows</li> <li>▪ Define user access by operational perspective</li> </ul>	<ul style="list-style-type: none"> <li>▪ Change graphical views easily — pie charts, line charts, bar graphs, table display</li> <li>▪ Drill into data to gain greater detail and insight</li> <li>▪ Define user access by user profiles and operational perspectives</li> <li>▪ Protect access through user and password credentials</li> </ul>	<ul style="list-style-type: none"> <li>▪ Access data through a browser — web-based, graphical views</li> <li>▪ Employ current data for operational insights — up-to-the-minute, actionable information</li> <li>▪ Compare data and identify trends by hours, days, and weeks</li> <li>▪ Compare data by physician, modality, locations, etc.</li> </ul>
