

Who Said Cell Phone Jammers Should Be Banned?

What are the true reasons of illegality of cell phone jammers in some countries? Are those devices really as harmful as we are told? We are told jammers are bad, but we are not given sufficient proofs. You are the one to make your attitude to jammers considering all the facts about jammers. Here is the whole truth about jamming devices for you to know all advantages and disadvantages of this technology.

The method of blocking different radio frequencies is very simple. Jammer sends lots of signals on the frequency you want to block, so receiver, for example cell phone or GPS-tracker, can't establish the connection to the transmitter. As you can see, from

the technical point of view cell phone jammer is as harmful for our health as ordinary cell phone. As for the ways of usage, indeed jammers can be used by criminals to help them in their unlawful activities. But wait a minute, jammer is only the instrument and as every instrument it can be used to help people or to hurt them. Bank robbers use cars to escape from police. Should we illegalize cars because of that? By the way, forks and knives can also be used to hurt people. Does it mean we should start using chopsticks? And how about forbidding Internet because of great amount of illegal content on sites? We are always told about how jammers can harm ordinary people but why don't we ever told of the advantages people get from using jammers? The best way to convince people not to use phones in theatres and cinemas is to make all cell phones in the hall inoperative. And don't forget about personal privacy. Don't know how about you, but I'm not happy with the fact that anyone with special equipment can easily track my location and listen in my conversations. And the only thing that can secure my privacy is a jammer working in my pocket. Jammers are successfully used not only by ordinary people, but by big companies also because the most effective way to prevent industrial espionage is to block all transmitting devices in conference hall with a help of almighty jammers. And that's only a small part of the truth about jammers that is concealed by the mass media. Society should be given all information before judging anything.

Luckily, many countries haven't illegalized jamming devices so their citizens can freely protect their privacy if they have such necessity.
