▸ Complete enterprise file transfer platform

▸ Simple and easy to use

▸ Multiple security measures

▸ Powerful and flexible management

▸ Implementation within hours

▸ Leverages existing IT infrastructure

Safe-T

Enterprise File Transfer Platform

Safe-T offers a complete suite of applications for secure file transfer, including ad-hoc transfer, file management and automatic transfer. The system's proprietary Unified Platform is designed for maximum extensibility so you can leverage your existing IT infrastructure. This lets you create a file transfer solution that not only precisely fits the needs of your business, but also has the industry's lowest TCO.   Supporting the entire solution is a robust foundation that delivers enterprise-grade security, policies, audit trails and reporting.

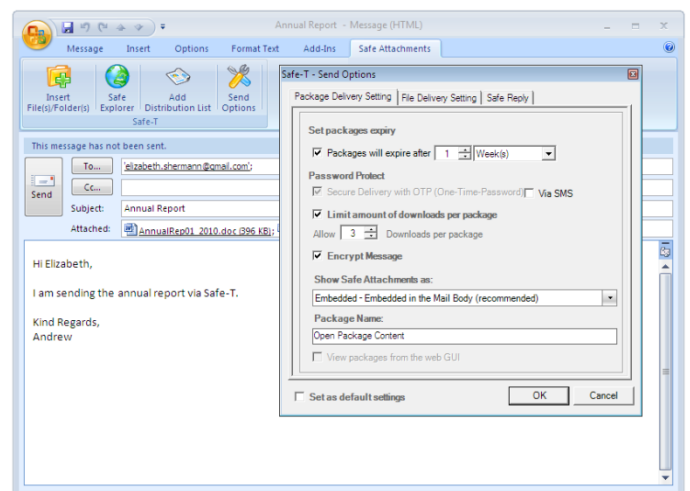

Unmatched Ease of Use

File transfer can't get any easier than using Safe-T. Whether using Outlook, a Web interface, or a Windows Explorer extension, you can securely send your most sensitive data—without any size limitations—to recipients inside or outside your enterprise network. After sending, you can also recall or change "packages", as well as invite external users to securely submit files with a "SafeReply".

Multiple Security Measures

Safe-T offers advanced security and management capabilities that substantially increase the security of your sensitive data transfers and help comply with SOX, PCI, GLBA and more. The use of secure protocols, one-time passwords, encryption, download limits, file expiries, reverse proxies and others help ensure that your data will be shared with only your intended recipients.
