Custom Storage Vision...

"Our vision is to take a personal, hands-on approach to provide our customers with the hardware, software, and services they need so they can cost-effectively store, protect, manage and retain their electronic data."

-Bill Nowlin,
CEO & Founder

Custom Storage Technology Partners

Business Advantage through Intelligent Storage

Business Advantage through Intelligent Storage

Areas of Expertise:

Storage Architectures
Data Protection
Virtualization
Email Archiving
WAN Acceleration
Backup & Restore
Storage Consolidation
Disaster Recovery

We specialize in the interoperability of Storage Technologies

Data Storage Experts
Store, Manage, Protect & Retain Your Data

We strive to distinguish ourselves through customer focus, personal attention, & technology expertise.

IT infrastructures contain a growing number of seemingly disparate, components that need to work together flawlessly to drive business. Each distinct component—a new SAN, a new DR strategy, virtualization, or globally remote offices—requires your organization to learn, communicate, and operate in a new "language." Proficiency with each new language or component can be challenging, if not detrimental, to your organization, already consumed by daily operation of the business.

Custom Storage is a highly specialized organization—we concentrate expertise, energy, & resources on ensuring your teams do not break stride through new projects.

- Our methodology is very straightforward: quickly get up-to-speed, understand technical and business problems, then offer guidance to meet operational and business objectives.

- Our end goal is simple: deliver a data storage solution matched to your business needs, mindful of your budget constraints, and designed to enable you to achieve your business goals.
