

nFocus Software Solutions

TraxSolutions Non-Profit

TraxSolutions Non-Profit is a comprehensive suite of software that helps non-profit organizations track critical data and improve the impact of their programs and services. For more than 16 years, TraxSolutions has delivered services to single-site organizations as well as serving statewide and national deployments.

TraxSolutions includes several specific components that can be used individually or combined into a more robust solution. The services included in TraxSolutions include:

- Participant time and attendance tracking
- Grant Management
- Outcome Measurement
- Individual and aggregate-level reporting
- Online registration and fee management
- Integration of third-party data for the purpose of analysis
- Staff and volunteer management
- Donor management
- Survey and assessment tools
- Case management

TraxSolutions Community

nFocus Software's TraxSolutions Community suite enables social-service organizations and government agencies to measure and improve the impact of their programs and services, allowing the community to achieve results that support communitywide goals.

TraxSolutions helps easily identify at-risk children and youth, track the impact and efficacy of programs, establish targets for future performance, align resources more effectively and maintain accuracy and accountability. nFocus Software's solutions answer the question, "Do we have what we need, where we need it, and how effective are our programs at achieving established goals?"

The company's OneCard solution makes the capture of key data seamless and effective for any community. The system has the ability to integrate data from external sources, such as student information systems, crime, census data, transportation routes and more, in order to improve the delivery and impact of community services.

It is used by schools, school districts, universities, community centers, parks and recreation centers, Boys & Girls Clubs, Police Athletic Leagues, Salvation Army Youth Centers, faith-based programs, and many other educational and non-profit organizations.

TraxSolutions Community also can be utilized by municipalities to capture and process data from multiple sources, allowing community stakeholders to gain insight, perform gap analysis regarding "need," and determine which agencies would be best suited to meet those needs.

In addition, the referral capacity within the system allows stakeholders to know organization utilization and programmatic impact. The system has native intelligence that provides referrals to appropriate agencies based on individual need. The system then tracks the services provided, in order to ensure the desired outcomes are achieved.

TraxSolutions Government

nFocus Software customized its TraxSolutions software to help the United States Army improve the effectiveness of its training. Called the Army Digital Training Management System (DTMS), the software provides the Army with an easy-to-

use, web-based application that allows the Army to:

- Quickly identify required training.
- Efficiently retrieve training documents.
- Seamlessly schedule and manage multiple training events.
- Evaluate the efficacy of the training curriculum.

nFocus Software's DTMS tracks the training of all 1.4 million soldiers in the United States Army. The company's software also helps the Army exchange training and readiness information with the Department of Defense.

In addition, nFocus is working with General Dynamics C4 Systems in the development of advanced training software for the U.S. Military's Future Combat System (FCS).
