

## **E-Commerce Enable Your JD Edwards EnterpriseOne & World Software**

### **About ERP2Web**

ERP2Web from CDI is a suite of .NET Framework and XML based solution that transforms your JD Edwards application into a real-time Business-to-Business (B2B) and Business-to-Consumer (B2C) Electronic Storefront solution over the web. ERP2Web is easily and rapidly configurable enabling you to extend web functionality quickly without making any changes to your existing JD Edwards application.

- **E-Catalog - an electronic storefront**  
E-Catalog within ERP2Web offers a unique web storefront experience for users. You can publish and deploy your catalog to all or a subset of your customers/users for their business transactions over the web. The catalog provides real time price and availability information from JD Edwards and provides ability to create a real time sales order in JD Edwards.
- **Real-time Integration of ERP application using ERP2Web's XML interface**  
ERP2Web can be the single-point front-end to your JD Edwards EnterpriseOne or World. ERP2Web provides a Real-Time integration for Pricing, Availability , Order Creation , Order Status , etc.
- **Zero-Client B2B and B2C Solution**  
The web interface for ERP2Web is completely designed using .NET Framework, so any .Net enabled web server is supported. The web server can run on Windows platform. ERP2Web is a zero client solution with centralized application maintenance. There is no client side software required. A web browser is all that is required for the customers to access the functionality.
- **Upload from Excel**  
Customers can also upload items from Excel to create orders.
- **Refer and Reorder using My List**  
The user can create a list of products for future reference or to reorder.
- **Single User Interface for the desired content**  
Managing your static content with your e-commerce site is made easy by ERP2Web. Any static and/or e-commerce content can be accessed via a single portal using ERP2Web.
- **E-mail Notification**  
When a new order is created and when an order is shipped, unlimited recipients can receive an instant E-mail notification.
- **Increase the visibility of your Up-Selling Items**  
Up-Selling and fast-moving items can be specified for each group and can be displayed at the time of check-out.
- **Credit Card Integration**  
ERP2Web has a fully functional Credit Card interface integrated with industry leading payment gateways like VeriSign, Authorize.net, etc.
- **Robust Multi-Layered Security**  
We share your concern for security with your data on the web. ERP2Web sits behind your firewall (inside the DMZ if necessary) and also maintains your existing JD Edwards data security and integrity.

**Easy Administration & Customization**

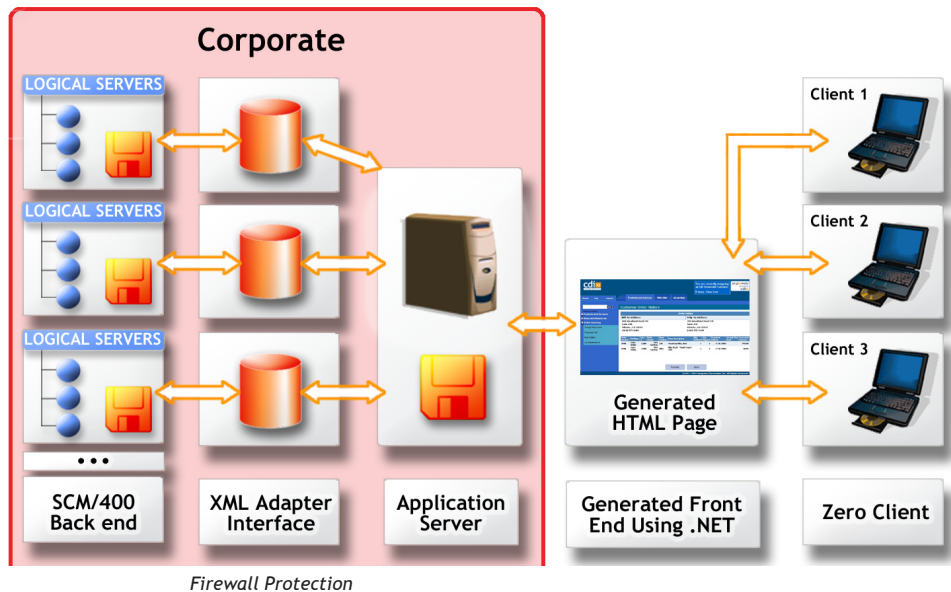

ERP2Web is a highly customizable and easily manageable solution. It comes with built-in, easy-to-use administrative tools to enable you to customize and manage your web presence the way you desire.

**Software Design**

The software design implements open architecture. ERP2Web does not require any changes to the JD Edwards business logic. The web client (Browsers) sends a request via the web to the ERP2Web application residing on the Web / Application server. The web server processes that request by connecting to the back end JD Edwards system by sending XML documents to the XML adapters enabled on the JD Edwards application.

Once a connection to the JD Edwards application is established, it invokes the ERP2Web server program (listener). The server program executes the request and returns the data back to the web server via XML. The web server then sends the response back to the web client.

**ERP2Web  
Technical Layout**

**Enabling Disparate Applications**

ERP2Web supports web enabling disparate applications on multiple machines using a single copy of the ERP2Web software and one portal for customers of the disparate applications.

**Maintenance & Support**

To ensure your satisfaction, CDI has instituted an ongoing Customer Support program. CDI offers comprehensive help desk support and technical service. The program helps ensure that ERP2Web continues to meet your business needs. ERP2Web Customer Support Representatives, who are ERP2Web experts, will promptly address all questions or concerns that come from participating clients who subscribe to ERP2Web maintenance program. By subscribing to the CDI maintenance agreement, a client is entitled to unlimited Call Center and E-mail support. Subscribers also receive ongoing software releases and upgrades.
