EnergyCAP

**The best selling energy efficiency software for over 30 years**

EnergyCAP: Measure, Manage, Save®

EnergyCAP is utility bill tracking and sustainability reporting software to:

- Eliminate billing errors
- Track interval data and meter readings
- Calculate cost avoidance
- Pinpoint wasteful facilities
- Streamline energy accounting, budgeting, accruals, and bill payment
- Generate analysis reports, graphs, and benchmarks
- Track greenhouse gas emissions
- Receive ENERGY STAR building ratings

EnergyCAP is powerful best-in-class energy management software that helps you get a handle on your energy information. With client/server network and web-based versions, EnergyCAP is perfect to meet your energy management and sustainability needs.

Payback: Usually One Year Or Less

Prospective EnergyCAP users frequently ask, "What's the payback? How much will I save?"

It's common for first year savings and cost recoveries to exceed 1% of your annual utility budget. How much you actually save depends on several factors: how well you are currently managing utility accounts; how much emphasis and resources senior management has applied (and will apply) to energy management; and what tariff and energy supply alternatives are available.

One fact is clear: you need to get a firm handle on your energy information. Energy information management provides the foundation upon which all further utility bill accounting and energy management initiatives are built.

> "We were able to find this $90,000 billing error so quickly thanks to the new EnergyCAP software that has been installed AND we were able to find the error BEFORE the paper bill was even opened thanks to the electronic data that PG&E provides us each month."
>
> **Energy Manager, City of Sacramento**

EnergyCAP
