SL-HLSTR
(optional)

SL-ND Streamline Tool

Forged Jaws

Pull-Pin design to quickly change between jaws

LED lights on both sides of tool

Lithium-Ion Battery for higher crimp estimates

After listening to feedback from our customers for a more robust, higher-quality, REC-style streamline tool, we developed the new **SL-ND** tool from the ground up. This new tool platform is the culmination of almost three years of research and development and will stand up to the most demanding tasks that linemen face every day.

The SL has a choice of three compression heads, the ND, O, or BG. The ND head combines ND and K jaws. Quickly change between head types with the pull-pin design.

No need for another battery system, as this tool operates on the same 14.4 volt battery used in all of the Huskie Robo tools. The new SL-ND Streamline tool not only carries a 5 year warranty on the tool but the battery and charger as well.
