

Because How You Ship Matters!

In today's competitive global marketplace, effectively managing the day to day complexities of multi-carrier shipping can be the difference between profit and loss. Optimizing your logistics operation by leveraging all carrier services, rather than limiting it to a few select carriers, enhances your ability to drive out operational costs, save precious transportation dollars, and improve the level of service to your customers.

ENTERPRISE SHIPPING

NexxShip™ is a global multi-carrier small parcel and LTL transportation solution that is built for the way today's businesses need to ship. Whether your shipping operation is facilitated from a single warehouse location or distributed around the globe, NexxShip's component-based design facilitates implementing the right solution; regardless of the number of locations, unique business rules, processing functionality, or manner in which it needs to be integrated with other critical business systems.

INTEGRATION WITH ENTERPRISE APPLICATIONS

When integrated with front-line business operations and enterprise business applications, NexxShip ensures that precise shipping execution results in getting logistics information into the hands of people who need it, when they need it; and to the systems that require it for critical business processes. Integrating NexxShip allows you to extend the capabilities of your existing ERP, WMS, SCM, TMS, and Accounting systems.

REDUCED TRANSPORTATION COSTS

NexxShip helps you lower transportation costs by allowing your business to rate shop for the lowest shipping method across multiple small parcel and LTL carriers; alert you to opportunities where Ground service meets or exceeds expedited delivery commitments; and prevents inaccurate, outdated, or omitted information from resulting in late deliveries, returns, and costly carrier assessorial charges.

SUPPORTED CARRIERS

Built for the way today's businesses need to ship.

MULTI-CARRIER COMPLIANCE

Powered by the most advanced carrier compliance components, NexxShip ensures that you consistently meet carrier requirements for rating, routing, labeling, and EDI. NexxShip's supports certified shipping for BAX®, DHL®, FedEx®, Lone Star Overnight, Purolator®, UPS®, and USPS®. Nexxio ensures that you stay compliant with each carrier so that the logistics data being re-purposed to your enterprise applications is only of the best quality.

RATE SHOPPING

Not all carrier services are created equal. For this reason, NexxShip helps you determine the least expensive way to ship a package or evaluate the least costly method when considering delivery time and date requirements. For businesses that ship from multiple Distribution Centers (DCs), NexxShip factors in time-in-transit information to help you determine from which DC customer orders should ship.

INFORMATION & REPORTING

Logistics is the link between your customer and virtually every operating activity of your business. Putting logistics information into the hands of people who need it, or systems that require it, saves your business both time and money through increased efficiency and improved productivity. As NexxShip processes shipping transactions, valuable data is stored in a SQL Server database, which can then be sourced by other business systems or report writers such as Crystal Reports.

INTEGRATION TO ENTERPRISE APPLICATIONS

Nexxio has successfully integrated NexxShip with most popular ERP, WMS, e-Commerce, Order Management, and Accounting Software systems, using industry standard methods such as XML, ODBC, TCP/IP, File transfer. If your business does not use a popular application, but rather uses a custom or legacy system, Nexxio's NexxConnect integration tool provides the power and flexibility to make what would otherwise be a difficult and challenging project, simple and easy. NexxShip's API is available to those who need to more fully integrate its capabilities. Examples of enterprise applications that NexxShip has been integrated with include:

- SAP®
- JD Edwards®
- Oracle®
- Epicor®
- SAS®
- Infor®
- Great Plains®/Dynamics®
- Sage® Accounting/ERP
- AccPac®

SPECIALIZED PROCESSING CAPABILITIES

Flexible technology means that NexxShip can incorporate processing capabilities to help your business address unique challenges, processing requirements specific to your industry, and meet the ever changing needs of your customers.

ADDRESS VALIDATION

The on-time delivery of a customer order begins with a properly formatted and deliverable shipping address. NexxShip key capabilities include:

- Rapid data capture
- Validate domestic & Intl. addresses
- USA residential delivery indicator

BATCH PROCESSING

Drop shipping for clients can be tedious and expensive, especially if you are required to manage and format multiple lists, from multiple data sources. NexxShip batch capabilities include:

- Interactive data mapping tools
- Client-specific import maps
- Client business rules processing
- Client-required labeling

"BLACK BOX" PROCESSING

In-motion parcel shipping reduces the labor required to process packages individually from PC workstations. NexxShip supports small parcel & LTL scanned input processing and includes the following key capabilities:

- Auto rate and route
- Read weight from in-motion scale
- Correct and validate addresses
- Drive print applicators
- Integrate with PLC and other controls
