

Iris Data Services Opens New Data Center in New York Leading Electronic Discovery Company Expands New York Operations

NEW YORK, September 13, 2010 — Iris Data Services, a leading provider of eDiscovery solutions, announced today that it has opened a new data center in New York City at 111 Eighth Avenue, New York, NY, 10011. This data center will service New York-based customers and significantly increase Iris' processing capacity at their existing New York production office (307 W. 38th St., 8th Floor, New York, NY, 10018, 212-643-3000). Iris Data Services is a leading supplier of electronic discovery solutions including eDiscovery, computer forensics, attorney document review, and online hosting utilizing their proprietary review platform, *Unify*TM.

“We opened a full service data center to directly support our New York clients,” said Damon Goduto, Iris' Vice President of Sales. “This will provide our customers extremely fast turn around times on their projects—we are able to locally process over 1TB of native documents per day and provide same day turnaround on our client's rush projects.”

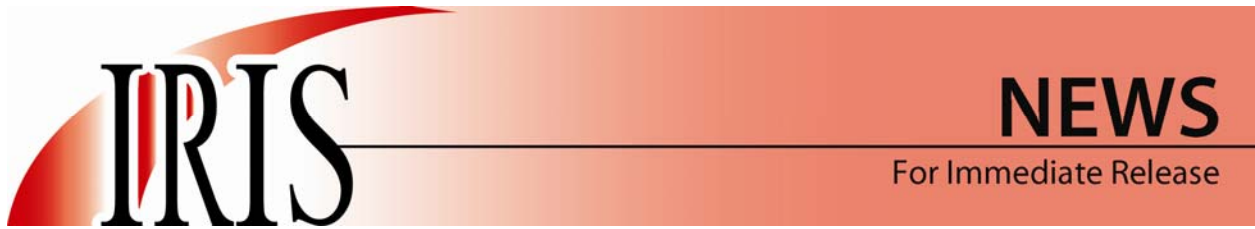

“Our clients are facing increasing demand for fast turn-times on data discovery, while getting less and less advanced notice about projects,” said the president of Iris, Major Baisden. “This data center gives us immediate capacity to process large volumes of data locally, helping our customers meet their demanding deadlines. Further, by using our virtual processor infrastructure, we can expand the data center capacity very quickly.”

About the Iris New York Data Center

The Iris data center in New York is a SAS 70 certified data center located at 111 Eighth Avenue, New York, NY, 10011 (between Eighth and Ninth Avenues and 15th and 16th Streets). The data center sits on a fully redundant power grid, employs generator backup, and has digital video surveillance as well as manned security 24 hours a day, 365 days per year. Iris operates 100Mbps of daily redundant bandwidth provided by two separate ISPs.
