Seavus DropMind™ v2.3 new features

New Features	Description
New ribbon design	Now you can use and work in the fresh new interface. The implemented ribbon design makes the desktop and the web application an integrated piece with compatible designs.
My templates	In the new "My Templates" folder you can find and retrieve maps which are saved as My Template. You can open My Templates folder, view maps, see each map's info, open it or delete it.
Topic order	The order of inserting sibling topics is improved by allowing you to insert sibling topics next to selected topic.
Recycle bin folder	In the Recycle bin space you can find and retrieve your deleted maps. Open the Recycle bin, view all the deleted maps, see each map's info, retrieve it or delete it permanently.
"Upload" as PDF/jpeg on Google Docs	Now you can upload the DropMind™ maps as an image (JPEG) to your Google Docs account. The uploaded map on Google Docs will be fully expanded and fit to screen map in a JPEG format.
Google Apps authentication	When you will login to DropMind™ with your Gmail (Google) account (Single sign on), you have your Gmail username and password prefilled and logged on Gmail. In this case you don't have to enter your Gmail account manually in the Settings section and can communicate with your Google account: attach documents from Google docs, import Gmail contacts, search through Google Docs, and upload a map on Google Docs.
Simultaneous collaboration improvement	<p>"View changes" function on mouse roll over is available every time when you enter the simultaneous collaboration mode. Extended functionality is implemented in the Filter: filter by collaborator, enter the topic name or part of the name and to initiate filtering, List of filtered results.</p> <p>Extended functionality is implemented while sharing map: each member of the collaboration process can create URL of the collaborated map.</p> <p>Moreover map Statistic functionality is available now, that shows information about: Session duration, Number of activities per minute, Number of topics, Number of subtopics, Number of icons, Number of images</p> <p>Restore versions functionality: Map owner will be able to restore the map in some moment in the past.</p> <p>If you lose internet connection, just click the Reconnect button and the connection will be regained.</p>
Administrative console	The administrative console is a new web hosted application for administration of In-house server or group users. This

	application allows you as an administrator to manage users. Application gives possibility to import set of users from excel file by their user name or e-mail address.
Simultaneous collaboration API	Completely new API based on simultaneous collaboration interface is implemented. Seavus DropMind API is a rest based web service. It works with post and gets methods depending on the action that needs to be invoked on the server. The format of the post requests and all the responses are in JSON format. UI implementation is left to the API user.

Seavus DropMind™ v2.0 new features

New Features	Description
Alerts	Use alerts to set a reminder to open and work with a specific map at an assigned date and time. You can set an alert for any map topic.
Map Parts	Save part of a mind map you've created as a Map Part for easy re-use. The map part is saved in 'Library' and you can easily apply this actual part to other place in the map, or totally different map.
Link to topic in same map	Add a hyperlink to a topic that will associate it with another topic in the same map. When you click on the hyperlink icon in topic, the "linked" topic becomes selected and viewed.
Seamless integration	This feature enables you to get the best from desktop and web solution together and have both Seavus DropMind™ - Desktop and Seavus DropMind™ - Web versions of mind maps with their last changes. The automated synchronization allows you to get the latest changes and be updated anytime and anyplace, without losing any information.
Simultaneous collaboration	This feature enables you to work together on one map simultaneously and making changes at the same time with your friends, colleagues or family. All changes made by each participant will be visible to all collaborators and viewers. The main purpose of this improvement is to further automate, simplify and fasten the process of collaboration.
Timeline	Timeline is review tool that can be used to review collaborated map history. Each action during the collaboration is recorded. Each participant in the collaboration process can restore map from some point in Timeline.
Chat	Chat room window can be opened per every collaborated map for messaging purpose. These messages are recorded together with map changes, so it can be reviewed latter in Timeline.

MS® PowerPoint	Now you can create and export MS® PowerPoint presentations with advanced features and predefined slide layouts.
MS® Word	Now you can export your created mind maps in MS® Word with advanced layouts. The exported map in a MS® Word document gives complete overview of the inserted topics and all other visual elements created in Seavus DropMind™.
Export to Mindjet 6	Now you can export Seavus DropMind™ mind map (.dmm) with all map and topic properties to MindJet 6 file.
Integration with Google Docs and Google Contacts, Google Search	Google integration offers well-built solution for complete control you're your documents, by uploading and attaching your Google Docs to any topic within your mind maps. Moreover, it provides importing Google Contacts in the mind map community and making advanced search through the content of your Google Docs.
Integration with Basecamp - project management application	The Basecamp integration offers possibility of importing and exporting project data and task information between Seavus DropMind™ and Basecamp and provides complete solution for project related activities, such as collaborative brainstorming, discussions and task delegation. On the other hand, importing entire projects, to-do lists or to-do items from Basecamp offers complete overview of the project in visually distinctive way.
In-house solution	You can use as in-house solution with an automated setup of complete Seavus DropMind™ service that can be easy deployed on your own server.
Language support	Seavus DropMind™ speaks your language now! All German, Japanese, French or Spanish users can work and brainstorm in their own language with all of the new and powerful features.
Seavus DropMind™ presentation mode improvement	Work with a higher slide and schedule the generation of slides upon your needs. Arrange the presentation as you desire.

Seavus DropMind™ v1.1 new features

New Features	Description
Task properties	Enter task information to the appropriate topic and determine task priorities. Moreover, you can mark the Start Date and the End Date of the selected task, add Duration, % Complete, as well as assign Resources responsible for working on and finishing this task.
Filtering	Filtering is a way to view only a subset of the topics on a map. This eliminates the need to delete topics that are not currently of interest, but remain valid map content. To filter some topics select a set of topics and then press on show or hide button, or filter topics based on their properties: icon markers, notes, hyperlinks, attachments, key topics or alerts.
Numbering	Numbers will be added before the topic text. Topics will be numbered from the selected topic. You can choose the numbering scheme from a predefined set of options and depth to which the numbering will be applied.
Summary	Summary is a type of Boundary that allow to put callout on the group of topics/subtopics.
Map styles	Select your preferred style from a set of predefined styles and apply it to your already created map or a completely new map.
Topic styles	Create a new style from the selected topic and add them in the topic styles 'library'. Afterwards you will be able to choose from different topic style and apply them on topics. These include the topic font, shape and color, alignment, size and margins, and subtopics layout.
New topic ties	Select your preferred topic tie (connections) from the predefined types: Strait, Elbow, Angle, Curve.
New Layouts	Besidethe unique 4 sphere Map Layout now you can choose your desired layout from the additional: Left-Right map, Right map, Left map, Organizational chart top-down, Organizational chart down, Organizational chart up.
Advanced search	Advanced search is a powerful search engine built in the application. You can search in the various locations and by different categories.
Export to XML	Open format for importing in other mind mapper. Write all included elements in .dmm mind map format.
Export to Freemind	Export current Seavus DropMind™ map in the Freemind format.
Tweeter integration	Post tweet feeds directly from Seavus DropMind™. Select a topic and tweet its content with a single click. Moreover, get map alerts as direct messages directly in your Twitter account, simply following DropMind on Twitter and allowing it to tweet changes in the application's "Publish" section.
Delete user account	You are able to delete your profile from Settings. Your maps will be deleted on the collaborators/viewers' user spaces and

	you will be automatically removed from all maps where you've been collaborator/viewer and from each "My Map Community" where you existed as a friend.
Delete user account	Seavus DropMind™ is programming interface which should provide the following functionalities to other developers: <ul style="list-style-type: none"> • External user can embed DropMind service in their web sites or services; • External user can communicate with DropMind web service thru exposed API methods. This functionality will allow creation of map documents using object model.
Multiplatform support	Multiplatform support: Windows XP, Vista, 7; Mac OS, Linux Ubuntu.
Improvements	Description
Better integration	Better integration and synchronization with Seavus DropMind™ desktop application.
Changes mode	If there is no accepted collaborator on a map, there is no changes mode. You will open map directly in edit mode. If there is a collaborator/viewer on a map, changes mode appears, a tooltip exist with detailed explanation for offline/online moments.
SSL certification	Implement SSL certificated protection.
Server hosting	Amazon Web Service hosting
Shortcuts adjustments	Adjustment to widely used default shortcuts "Enter" / "Insert"
Windows 7	Test and compliance with Windows 7.
Import/export	Embedding of all new functionalities in import and export features.
