

The Private Label Global Supply Chain

End-to-end Visibility, Intelligence, and Collaboration

Leading retailers including Staples®, The Home Depot®, JCPenney®, RadioShack®, and Timberland® use Arigo solutions to improve collaboration, drive better business decisions, and achieve real cost savings across their supply chains.

Arigo is the industry leading provider of Visibility, Intelligence, and Collaboration tools for Retailers and Brand Owners, supporting Global Sourcing and Trade Management from pre-production through delivery. Starting with a globally enabled offering, Arigo's Global Sourcing and Trade Management software solutions provide unequal infrastructure for sending, receiving, and storing data across the supply chain. Core processes such as costing, sample tracking, supplier quotes, and vendor profiles are integrated to assist in the ideation, development, sourcing, purchase and movement of product. This infrastructure, built on industry expertise and best practices, is time tested and has delivered value to leading retailers worldwide for more than a decade.

In today's global economy, clear lines of communication, accountability of actions, and analysis of business relationships are more important than ever. Real-time data and expedition of the decision making process needs to be timely and accurate. Arigo's Visibility, Intelligence, and Collaboration Toolsets allow for scalability throughout the pre-production, production, and in-transit processes of the supply chain. Arigo is specifically designed for the end user to be able to make decisions from anywhere in the world; whether sitting at a laptop analyzing vendor scorecards in preparation for negotiations, or doing a field audit of a factory and updating via mobile device.

Visibility

The screenshot displays the Arigo Desktop application interface. At the top, there's a navigation bar with the Arigo logo and a 'Welcome Sourcing Manager' dropdown. Below this is a main menu with options like 'My Arigo', 'Reports', 'Dashboard', 'Real Time Content', and 'STM'. The interface is divided into several sections:

- My Alerts:** Lists alerts such as 'Vendors with Failed Audits', 'Purchase Orders to Approve', 'Purchase Order Change Requests', 'Purchase Orders to Ship Within 30 Days', and 'Samples that have Shipped'.
- My Tasks:** Lists tasks like 'New Items from PLU', 'New Items from EC Quote', 'New Quotes Received', 'Purchase Order Change Requests', and 'Product Catalog'.
- Manage My Vendors:** Lists vendor-related tasks like 'Certified Vendors by Product Category', 'Child Labor Certification Due', and 'Vendors Pending Certification'.
- Visibility:** Lists visibility-related tasks like 'Edit Shipment Delivery Info', 'Shipped Qty vs. Ordered Qty', and 'Purchase Orders to ship within 30 days'.
- Mail:** Lists mail-related tasks like 'Private Messages (1 New Messages)' and 'Configure email accounts'.
- Message Board:** A section for managing categories, threads, and posts. It includes a search bar and a table with columns for Category, Categories, Threads, and Posts.
- Calendar:** A section for managing events, including a calendar view and a list of events.
- Document Library:** A section for managing folders and documents, including a search bar and a table with columns for Folder and # of Documents.

Arigo empowers its users by delivering all the tools needed to optimize processes from pre-production through delivery, all in one easily accessible application, The Arigo Desktop.

When your orders are being fulfilled thousands of miles away, in languages and time zones foreign to the home office, a single view of quotes, purchase orders, contracts, documents, invoices, and shipments is essential. To deliver complete visibility to retailers and brand owners and ensure proper shipment and delivery every time, SKU-level traceability through the order cycle, and granular visibility of purchase order milestones is needed. Arigo drives supply chain acceleration and efficiency, and maximizes profits while minimizing logistics and administrative expenses.

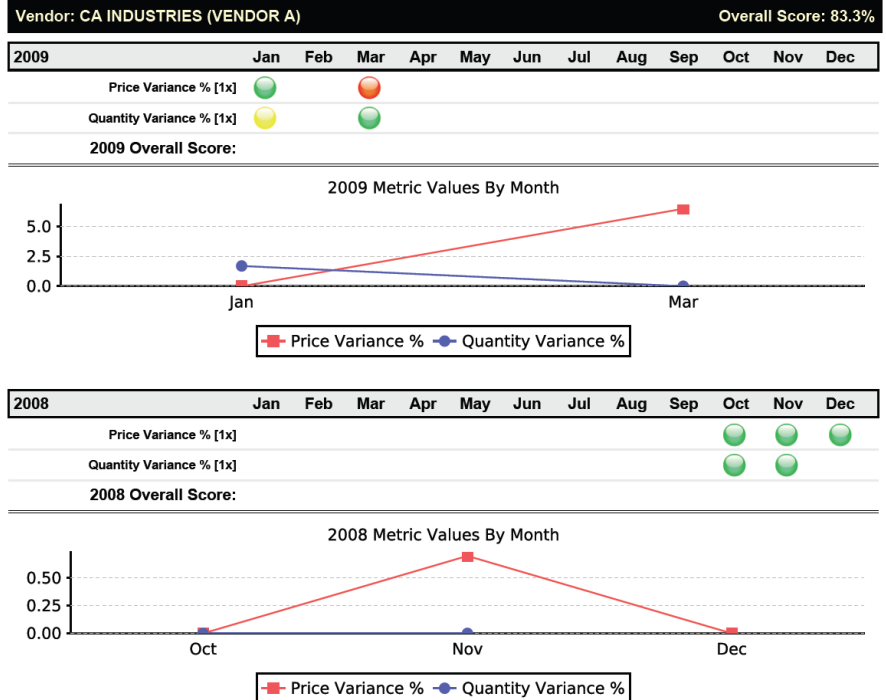

The Arigo Desktop is a one-stop, intuitive desktop and mobile portal providing access to all of the tools and content needed to power companies managing private label and global trade. Through the Arigo Desktop, transactional data as well as real-time trading partner data, and other relevant industry data, can all be configured on a single homepage. Configurable by user, this homepage becomes "command central" for all things relating to the real time development, sourcing, order, and movement of products in the global supply chain.

Intelligence

Thousands of data points are being exchanged between multiple parties in the global supply chain on an hourly basis. Some data is required in batch, while other in real-time. Creation of a systematic approach for developing and enforcing principles that guide actions in business and social conduct is key. A structure to ensure continued positive vendor performance fosters customer loyalty and promotes brand recognition. Arigo's team of industry experts understand this, and uphold a commitment to deliver factory level data to the Arigo Desktop, empowering retailers to make better business decisions, reduce cycle times, and increase speed to market.

Arigo offers the Business Intelligence framework for vendor scorecarding, Key Performance Indicators (KPI), and full reporting from the beginning of the process through to the final audit and reconciliation. Arigo makes it easy to track price, quantity, and variances against KPI's over time and to meet seasonal needs. With over a decade of best practice knowledge in building valuable reports; Arigo's tie to the transactional data provides "one version of the truth" for data analysis and reporting. Turning data into relevant information for analysis is what Arigo is all about.

arigo Vendor Scorecard Report

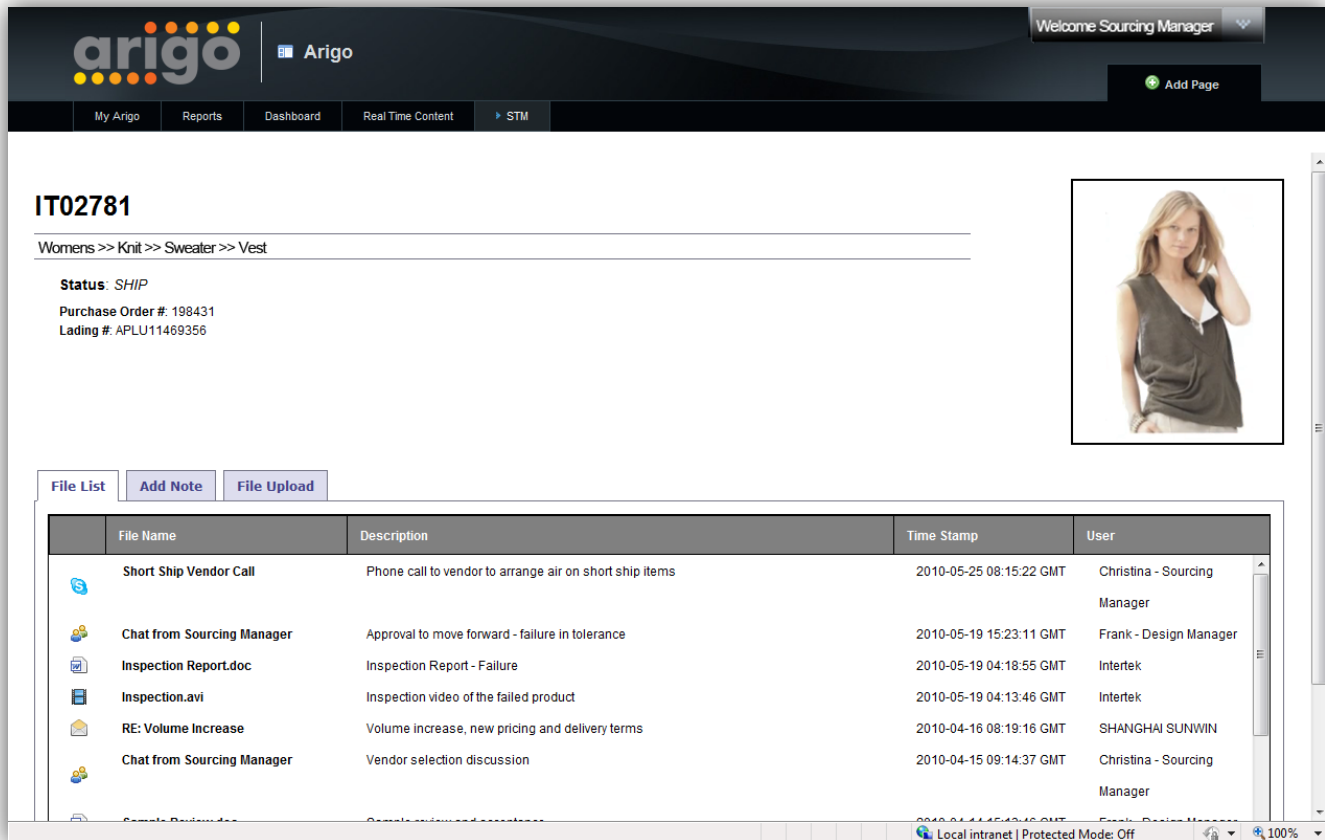

Protect the value of your brand by tying sourcing decisions to vendor compliance, product compliance, and delivery performance – all through Arigo's Business Intelligence Solutions.

Key Features

- Manage vendor compliance data, including templates for certifications, social compliance, factory compliance, and key performance indicators.
- Compare the full range of cost alternatives, including materials, labor, duties, service fees, and logistics.
- Manage variances, charge-backs, promotional discounts, and pricing adjustments.
- Calculate duties for multi-product, multi-country goods based on packaging and assembly.

Whether communicating through instant messaging, web conferencing or blogging; Arigo takes collaboration and audit ability to a whole new level.

In today's global economy, clear lines of communication, accountability of actions, and analysis of business relationships are more important than ever. Real-time data and expedition in the decision making process needs to be timely and accurate.

Employees, vendors, inspectors, 3PL'S and others are texting, IMing, emailing, conducting video conference calls and web presentations about the sample, product development, purchase orders, logistics and much more. While all those collaboration technologies are currently being used, chances are they are not being used to the best benefit of the organization. The Arigo application not

only enables collaboration, but allows the different forms of collaboration to be attached and archived throughout the lifecycle of the product. Through the stages of pre-production, production and logistics, there are issues and challenges that need resolution. The explanation for the issues along the way are no longer stuck in an employee's email, IM or Skype, and can now be attached and archived with the item, work order, PO and/or Bill of lading with Arigo Enterprise Collaboration. With Arigo's Collaboration tools, your team can quickly pull required information together for issue resolution.

Enterprise Collaboration

Arigo's Collaboration tools allow for the integrated use of the most notably used communication methods in the marketplace today.

Real time collaboration in the global marketplace has become second nature to doing business in today's economy. With tightened travel budgets and the need to bring product to market faster; instant messaging, video web conferencing have become part of the daily work life. Arigo takes collaboration to the next level by taking commonly used communication tools and tying it directly to the transaction. Now a video, used to finalize product details can be tied to the cost analysis with full audit visibility throughout the transaction.

Key Features

- Correspondence tracking
- Trading partner data fields
- Auditable change tracking
- Integrated email and IM
- Trading partner portals
- Mobile device capability
