A Triumph of Brilliant Color
Hospitality TV

NX32H60

- Hotel Features
- RS232 Terminals
- USB Clone
- 4 Pre-drilled Holes on Stand
- Swivel Stand (45 degree)
- TruSurround XT
- EPG
- Energy Star
- Wide Visual Angle:178
- High Contrast:30000:1
- Built-in ATSC/NTSC/QAM Clear Tuners
- 3D Comb Filter
- HDMI Inputx3
- **1** Year Warranty

DLC

ACM

Conventional · nexus

Conventional · nexus

Nexus' unique dynamic Luminance control DLC image analysis system ensures teh brightness of each picuture achieving the best possible picture quality.

Analyzes the color of the digital signals before and after the images, together with seperation from the horizontal, vertical and diagonal directions of each signal. Improves the color quality with innovation arithmetic.

TSXT ◉
TruSurround XT

By TruSurround through any two-speaker playback system (including the internal TV speakers), you can experience the strong sound of a virtual environment, which is fully compatible with its multi-channel format.

Full Color Optimizer

nexus Full Color Optimizar technology applies the new (AI) Aritficial Intelligence fuzzy control technology in the color engine and enhances color images by a color gamut to get automatic change. Additionally, depending on the signal strength, a Full Color Optimizer can digitally analyze brightness, color, contrast, clarity, and color temperature. DNMETM, ACM, DCDI, and CCS can also be used to upgrade technology, achieving a high-definition image.

Enhanced Color Imaging

Using the world's most advanced second generation image quality enhancement technology (color gamut enhancemente technology, nexus is able to improve the three primary colors imaging and processing tecnology and intuitively and effectively adjust and repair the color deviation. In this case, we can not only make most use of the dis play component to get ideal color, but also precisely adjuct color gmaut so that the color gamut coverage can come to 80 percent.

USB Clone
USB clone allows for custom setup and programming information to be quickly copied from a "master" nexus brand LCD, into an unlimited number of identical models. This helps save the installers hours of time duplicating the hotel TV settings, such as minimum volume, maximum volume, start up channel, channel mapping, etc.

Swivel Stand	45 Degree(Left/Right)
RoHS Compliant	Yes

REAR JACK PANEL
(32" 26")

SIDE JACK PANEL
(Ref. only)

The Flat Panel Modular Wall Mount intuitive design makes it easy to mount Nexus LCD TVs with expandable wall brackets and wall plates.

3D Comb Filter

Conventional   nexus
By using the unique digital dual-core, the processing speed is four to eight times that of normal flat-panel TVs. In addition, the simulating optimization processing engine uses 3D adaptive technology to attain optimized pixel-by-point, which greatly improves the picture quality. TV programs can be presented with brilliant, high resolution images.

CCS

Conventional   nexus

Through the contrasts of digital signals before and after the images, together with separation from the horizontal, vertical and diagonal directions of each screen, the cluttered signal, spots and colors that overlap, can be eliminated effectively so as to improve the picture quality.

Ultra Fast Response

Conventional   nexus

The unique circuit in the drive is applied to speed up the rotational speed, so that an ultra-fast response is achieved. Even with fast-moving images, there is no tailing, which allows a clearer and more brilliant image.
