## IntroToGraphCalc

Announcing the Release of a Video Tutorial iTunes Application

HOUSTON, TX. (October 6, 2010) - Relentless Entertainment launches its first educational iPhone app - "IntroToGraphCalc". Sean Blaze Multi-Platinum Music Producer for 50 Cent and Chamillionaire, produced the Introduction to the Graphing Calculator mobile video tutorial solution designed to illustrate entry level techniques as well as mastery level calculations. Students at all levels and professionals will enhance their skills and become expert users of the TI-83 or TI-84 Graphing Calculator.

The video tutorials are presented by Roderick V. James PhD. EE, Adjunct Professor at Houston Community College. Dr. James has been involved with education for the past ten years. His past teaching experience at the Keller Graduate School of Management at DeVry University included the duties of Curriculum Manager for Project Management. Currently, Dr. James teaches a range of courses including Basic Math, College Algebra, Trigonometry, Pre-Calculus and Calculus. "These video tutorial courses provide a way for students to compliment their classroom experience. One could complete this course during a break between classes." said Dr. James. He continues, "The videos also provide the busy professional with a quick reference to a particular topic."

During the comprehensive 45 minute tutorial, students of this course will learn how to enter calculations using the order of operation, how to enter the irrational number pi, how to use the trigonometric functions sin cosine and tangent, how to enter powers greater than 2, and much more. Many students own these devices and we have found that many of them do not know how to take full advantage of their functions. Here we provide that knowledge and useful techniques to assist them with their work.

Compatible on the iPhone, iPad, and iPod Touch, the "IntroToGraphCalc" application is available worldwide on the iTunes App Store for a limited time at the price of \$1.99.
