

Martin Chair-A-Table® With Zero-Lift® Technology

The Martin Chair-A-Table is an innovative patient handling system promoting the safety and dignity of the patient, relieving caregivers of strenuous lifting, and facilitating medical exams by improving physician access to the patient. This unique FDA-approved system is comprised of a Martin Wheelchair which “docks” to the Martin Examination Table. Thanks to the Martin Chair-A-Table’s Zero-Lift® technology, no physical lifting of the patient is required and the risk of patient falls and worker injury is dramatically reduced.

Both the Martin Wheelchair and the Martin Examination Table are available in a range of sizes with multiple options that address specific medical and functional requirements.
