

LOADMASTER[®] LTL

POWERED BY McLEOD SOFTWARE

McLeod Software's LoadMaster[®] LTL is a complete business solution for transportation companies operating in the LTL sector. The LoadMaster LTL system delivers a strong core of functionality that every LTL carrier needs.

Delivering A Better LTL Solution

LoadMaster LTL will help carriers speed up their cross-dock and trailer capacity management processes, making it easier to react to updates. By adding capacity optimization to this process, LoadMaster LTL empowers both office staff and drivers to get more done in less time.

Data collection and communications are tightly integrated at the truck-and-trailer level and with forklifts and handheld RF devices, which means that errors are driven out of the work process and the system.

Your customers will feel the difference, too. The detailed appointment scheduling, robust web-interface for customers, and consistently accurate rating that LoadMaster LTL enables are only a few of the features that can elevate an LTL carrier's service levels above the competition.

The features of LoadMaster LTL include:

- Visual management for both cross-dock and trailer-floor-space capacity through an intuitive drag-and-drop graphical user interface.
- Simple, Full Featured LTL Pick-Up Entry
- Automated Rating with Tariff's, Accessorials, and integration to Rate Bureau and Carrier Rating Systems for consistent, accurate rating.
- Detailed Route Scheduling with Visual Mapping
- Detailed Appointment Scheduling
- Automatic Notifications & Alerts
- Capacity Planning Optimization
- PC*Miler or Rand McNally Mileage, Directions, and Mapping
- Cross Docking

- Local Pick-Up and Delivery
- Smart-Phone Integration for Dispatch and Tracking
- Dock-Door Planning and Management
- Forklift Automation
- Handheld Barcode Integration
- Air-Freight Planning & Dispatch
- Customer Web Access Portals
- An Important New Part of the LoadMaster Enterprise Solution

In addition to all of these features, LoadMaster LTL users can gain even more powerful and comprehensive functionality by including other components and modules of the LoadMaster Enterprise application suite.

This complete LTL business solution offers:

- McLeod DocumentPower for Business Process Automation/Management, Workflow, Imaging, and Document Management
- McLeod EDI integration McLeod Business Intelligence (BI) Foundation
- Revenue & Expense Allocation
- Trailer Tracking
- Rendition Billing
- McLeod's complete multi-company accounting software solution

- Customer & Carrier Web Portals
- Payroll and Driver Settlements
- Equipment Tracking
- Revenue and Profitability Analysis
- Driver Management
- Fuel Tax Reporting
- Direct Deposit/ACH
- Automated Driver Detention Management
- Rendition Settlements

The LTL Solution from the Industry Innovator

LoadMaster LTL is breaking new ground. It is built on the open systems Java™ technology foundation that the rest of the LoadMaster Enterprise product employs and it is the first complete offering for this market that can make that claim. This means your capital investment in the LoadMaster LTL system is a safe one, with a long future of growth and enhancements, not a technology dead end. LTL carriers finally have a choice when they need an operations management solution.
