

Trianz Releases Acceliant 6.1 after Successful R&D Partnership with Registrat-MAPI

Herndon VA, October 8th 2010

REGISTRAT-MAPI and Trianz Solutions are pleased to announce a further strengthening of their relationship via the release of Acceliant V6.1. REGISTRAT-MAPI has utilized Acceliant since 2007 for many of their Late Phase clinical studies. Acceliant V6.1, released earlier this year incorporates a number of groundbreaking functional enhancements and a new UI architecture, identified by REGISTRAT-MAPI, based on their unique experiences as the industry's largest leading global clinical research organization (CRO) dedicated solely to 'real life' late phase clinical research, and Acceliant users.

Stephen Webb, REGISTRAT-MAPI, President North America stated that the collaborative relationship with Trianz, "allows us to offer our clients innovative technologies and cutting-edge EDC specifically customized for late phase studies. With Trianz and their dedicated team of EDC development professionals, our biometrics team's eCRF development expertise, and by listening to our clients' needs, REGISTRAT-MAPI can deliver 'world class' Late Phase research services and solutions".

Acceliant 6.1 is a comprehensive, full life cycle e-Clinical Trials EDC platform comprised of Clinical Data Management, regulatory compliant Document Management, core Trial Management facilitating collaboration and site management, and rich business intelligence capabilities. What makes Acceliant unique is a proprietary Accelerated Trial Builder, which allows non-technical users to accomplish end-to-end configuration and build of a trial without the need for any programming. The Accelerated Trial Builder enables users to

define data-fields, edit checks, code lists, complete CRF layouts, validate the build and then deploy the trial with a single click.

Based on an integrated design and architecture, all Acceliant modules and features have been designed and built as a single native platform. Version 6.1 includes technology-driven usability features that are beneficial when working with large trials involving thousands of sites and patients; several design improvements for efficiently handling large scale data sets; powerful capabilities for import/export of large data sets; and rapid edit and validation of test data. These enhancements provide benefits for all trial phases.

Commenting on the relationship, Sri Manchala, President and CEO of Trianz, adds, "Trianz continues our commitment as a client-oriented organization and our partnership with REGISTRAT-MAPI is a culmination of over 10 years of dedication to the clinical trials solution industry. Acceliant is an industry leading tool enabling biopharmaceutical companies to decrease time to market, integrate data and processes, and address regulatory requirements." Mr. Manchala further added, "The ultimate goal of the Trianz technology and approach is to deliver speed and productivity in EDC for CROs, BioPharmaceutical and Medical Device companies worldwide. As such, Acceliant will positively impact their clinical trial management operations to make them more business intelligent, efficient and cost effective in a rapidly changing healthcare industry".

REGISTRAT-MAPI and Trianz Solutions are collaborating in an R&D model for the benefit of the industry at large and will continue to share successful developments in future.

About REGISTRAT-MAPI

REGISTRAT-MAPI, the industry's largest leading global clinical research organization (CRO) dedicated solely to 'real life' late phase clinical research, has extensive experience in the design, implementation and management of peri- and post-approval studies for biopharmaceutical and medical device clients.
