

MaxIDentity Suite satisfied ice requirements on iDL500 handheld TWIC reader

Fairfax, VA -- September 14, 2010 -- MaxID, a leading provider of identity solutions is pleased to announce that its comprehensive software offering, the MaxIDentity Suite, has met all requirements and satisfactorily completed ICE certification requirements on the MaxID iDL500 handheld multi-modal TWIC reader.

The MaxIDentity Suite contains a series of ready-to-use applications to read PIV, PIV-I, TWIC, CAC, FiXS, and FRAC smart cards as well as passports, ePassports, Seafarer ID cards, and driver's licenses. The product can be purchased using the Software-As-A-Service (SaaS) model, so organizations can pay a low monthly fee for the application suite as an alternative to purchasing outright. The suite is available on the MaxID line of multimodal products including the iDL500, iDL502, and iDL520 today. A trial version of the product will be included with each multimodal computer shipped from MaxID beginning later this month. The trial version allows the user to try the application suite for 60 days before signing up for a subscription. The MaxIDentity Suite was jointly developed by MaxID Corporation based in Fairfax, Virginia and MultiModal ID, LLC based in Falls Church, Virginia.

"We believe the MaxIDentity Suite will be well received by organizations looking to verify and validate identity both through government credentials as well as biometrics. The MaxIDentity Suite is based on a very contemporary architecture and designed to be extended to a multitude of technical platforms, new geographies, and into new market opportunities beyond the Maritime market. We believe it is well suited for the chemical/petrochemical market and to the power generation market." said Brian Skiba, President of MaxID Corp US.

About MaxID Corporation
