

Fortisware Delivers Upgrade to PST File Management Solution

New version of Fortisware's PST Finder application released to the public.

Clearwater, FL – November 19, 2010 – Today, Fortisware announced the public availability of a new, upgraded version of its PST Finder utility. The application, initially released earlier this year, is a lightweight PST file scanning and management utility designed for use by an IT professional who needs to locate, collect and/or archive the .PST data files created by Microsoft Outlook. The new upgrade release includes several key enhancements: support for importing PST files into Exchange Server 2010 Service Pack 1, improved scanning performance and a streamlined application workflow.

New Support for Microsoft Exchange Server 2010 SP1 Online Archive

PST Finder is one of the first 3rd-party partners to integrate with the new online archive mailbox feature available in Exchange Server 2010 Service Pack 1. PST files can now be directly imported into users' archive mailboxes rather than having to rely on manual processes to transfer mail from the main mailbox to the archive.

The application still provides import of PST files into Microsoft Exchange Server 2007 Service Pack 1 and Microsoft Exchange Server 2010 RTM. The company plans to add import support for Exchange Server 2003 in their next release.

Scanning Performance Boosted through Parallelization

The performance of the application in scanning for PST files has been significantly improved through the parallelization of core search logic. This enhancement, combined with PST Finder's already distributed search algorithms, means that PST Finder will now scan even more quickly and still with a minimum impact to the local workstation or server.

Streamlined Workflow Provides Improved User Experience

The new version of PST Finder delivers an improved user experience to the scanning, reporting and import processes of the application. The main screens of the application have been refined, and users can now make use of simple, clear navigation cues to make their way through the core operations of finding, centralizing and importing their PST files.

Availability and Pricing

PST Finder is available immediately and includes one year of support and updates in the purchase price. Pricing starts at \$500 for managing up to 25 computers with scaled discount for larger quantities. A 30-day trial version is also available at no cost for evaluation purposes.

About Fortisware

Fortisware is the software development division of Fortis Software, LLC, a Microsoft Gold Certified Partner and expert in Microsoft platforms and application development.
