ThinVNC SDK, Remote Desktop and Application Sharing Integration

ThinVNC SDK enables developers to add Desktop and Application Sharing capabilities to their applications. ThinVNC SDK is Suitable for integrated remote support, peer-to-peer collaboration and more.

Wilmington, DE – November 23rd, 2010 –

Cybele Software, Inc. is pleased to announce the release of **ThinVNC SDK 1.0**, an ActiveX Component Library that allows developers to integrate Desktop and Application Sharing capabilities into their Microsoft Windows applications.

ThinVNC SDK, provides both server-side and client-side components. On the server-side, a developer can include the ThinVNC server component to publish on-demand the entire application, selected windows or the whole desktop. On the client-side, developers can use ThinVNC client component to provide integrated remote application visualization and control.

ThinVNC client component comes in two flavors: ActiveX Component or pure-HTML5 JavaScript object. The final client application can be either a Windows executable or just a pure Web Application.

Additionally, ThinVNC SDK allows developers to publish "virtual" windows. This can be done by providing a bitmap representation of each virtual window to publish. An sample project that allows to take Macromedia Flash movies to any HTML5-capable Web Browser - including Safari on IPad/IPhone - is included with the Kit.

Both, the JavaScript and the Active clients connects to ThinVNC server using Ajax and WebSockets over SSL, making any integration secure and firewall-friendly.

ThinVNC SDK is suitable for any ActiveX compatible development environment and frameworks, including .NET/Mono framework and can be installed on Windows 2000/XP/2003/Vista/Win 7/Windows Server 2008. ThinVNC JavaScript client is compatible with any Operating System and any HTML5-compliant Web Browser such as Mozilla Firefox, Google Chrome, Opera, Safari, etc.
