Run by:

Andy Habermacher (UK / CH)
Certified Master Coach
CEO Corporate Training Programmes
Senior Consultant NeuroBusiness Group
International Speaker

Andy has over 15 years of experience in education and training. He has always been fascinated by psychology, human behaviour and the leadership tools for success. His recent work has focused on leadership coaching strategies and on practical implications of neuroscience. He has one book published and another two due to be published in Q4 2010.

NeuroLeadership (4) – Creative brains

Brain-Powered Strategies, Knowledge and Techniques for Greater Effectiveness

Overview

Recently neuroscience has increasingly been in the news. It has entered the business field through marketing. Obviously the implications for understanding how consumer's brains work and for sales are huge. Indeed this has, arguably, always been the focus of marketing.

On a leadership level how will this help us?

Neuroscience and particularly neuroleadership is a powerful tool to take the latest research into practical applications in business. It is a tool that will give more, and importantly, more concrete information on how to motivate, avoid conflict, create more action and much more. The insights show how the brain is working what we can draw from this and what this means for development strategies and dealing with core issues that many business struggle with.

There is a direct overlap with business psychology but NeuroLeadership comes at it from different angle with a more concrete understanding.

As an analogy I say that most business strategy deals with how to fish and how to specifically get fish on board. Neuroscience shows us where the waters are, and where the fish are swimming and how they're swimming. This makes it is so much easier to develop strategies to get the fish on board. Rather than, for example, picking various strategies to deal with motivation and inaction in business you can learn what the underlying causes are and develop a whole host of strategies and actions to effectively and efficiently deal with the issues.

Dates 2011:

27.01.2011 / 25.05.2011 / 15.06.2011 / 30.06.2011 / 30.09.2011 / 09.11.2011 / 08.12.2011
13:30-17:30

Bahnhofstrasse 52, 8001 Zurich, Switzerland

Price: CHF 420

Content

The workshop will follow on from "NeuroLeadership - An Introduction" and add some more specific content on how to boost creativity. Specifically we will be looking at how the brain processes creativity, inspiration and flow states. This will give more concrete insights into how to deal with these themes from a standpoint of our brains.

- Creativity in the brain
- Group creativity
- Flow states
- Engaging the unconscious mind
- Flexibility in thinking
- Flashes of inspiration?
- Encouraging the creative process
- Brain based innovation
- Fear blockers
- Stress blocks
- Engaging the whole brain
