# Bitrix

# Intranet Portal

# What's an intranet portal for?

An intranet portal is your organization's internal workspace.

An intranet is a gateway that unifies access to corporate data, enables effective communications among employees and provides rich collaboration features.

It helps you to manage files, applications, information and business processes more easily, and through personalized views.

When powered by evolving Enterprise 2.0 capabilities, an intranet portal tremendously improves business performance and minimizes risks associated with data availability and knowledge continuity. Moreover, it allows you to capitalize on the social dimension of your organization by leveraging deeper employee involvement and introducing creative communities.

*Enterprise 2.0 is a system of web-based technologies that provide rapid and agile collaboration, information sharing, emergence and integration capabilities in the extended enterprise.*

*Carl Frappaolo and Dan Keldsen  
Association for Information and Image Management.*

# Your business in Enterprise 2.0

Enterprise 2.0 is not a passing fad. It is the expression, in technology, of the well-established trend among executives that transforms traditional vertical subordination into a horizontal structure, leveraging the power of creative communities among employees to maximize profits and competitiveness.

Bitrix® Intranet Portal harnesses a wide array of web 2.0 technologies and puts them at your disposal to reach a new level of employee engagement, accumulate and manage knowledge and experience, and simplify information search, internal communications and decision-making.

*The underlying goals of Enterprise 2.0 are to improve the workplace. We find that the “2.0-world“ offers inspiration, technologies, and insight into how to create this improvement.*

*Gil Yehuda  
2.0 Adoption Council*

## Why does Enterprise 2.0 matter for your business?

- ✓ Web 2.0 revolutionized the Internet. Enterprise 2.0 will revolutionize your business
- ✓ Properly managed collective intelligence can solve tasks of nearly any complexity
- ✓ Knowledge is money. Enterprise 2.0 sets new standards for data capture, sharing and discovery
- ✓ Ever dreamed of better team management? Now you have a great solution.
- ✓ The young generation is native to social media. Give them their tool of choice
- ✓ Business processes become a well-oiled machine, with smoother transitions, faster feedback, and better-informed decisions
- ✓ Address the common challenges of information overload and knowledge silos

Tens of thousands of Enterprise 2.0-powered businesses simply cannot be wrong.

# Bitrix® Intranet Portal

Bitrix® Intranet Portal is synonymous with effective internal business communications. The software acts as an Enterprise 2.0 backbone for connecting employees, management, and partners; managing ideas, knowledge, and projects;

and facilitating document workflow, social networking and corporate broadcasting. We let you put your key processes under control and make your business more flexible, more transparent and more stable.

- ✓ Out-of-the-box intranet functionality
- ✓ Industry-leading set of Enterprise 2.0 tools
- ✓ Robust performance and security
- ✓ Extreme ease of use, availability and manageability
- ✓ Affordable pricing, transparent licensing

Launch your intranet in only **TWELVE\*** hours!

Customizable page layouts reflect your branding and corporate values.

*Improved functionality, performance, security and scalability set a new standard for the industry, assure a quality experience and bring Bitrix to the top position in the field of competition.*

# What's in a name?

Bitrix® Intranet Portal addresses core business needs of your organization. Here are just 10 of the many great benefits our software brings to your business.

	Demand	Bitrix® Intranet Portal Features
1	I want better internal communication	Built-in instant messenger, video conferencing, online portal reminders, e-mail integration, channeled notifications, forum discussions and personal blogs.
2	I want to have more employee involvement	30+ social networking tools including forums, blogs, comments, rating, friend management, polls, surveys, training and certification.
3	I want to improve workforce efficiency	Rich collaboration functionality including workgroups, task management, calendaring and file sharing. Built-in eLearning capability.
4	I want well-defined and transparent business processes	Pre-set templates and visual construction of custom business processes with real-time notifications and status monitoring.
5	I want to consolidate and manage knowledge	Document workflow with file versioning, roll-back, backup, commenting and tagging. Capability to connect huge data storages in a matter of seconds.
6	I want to quickly locate relevant information	Full-text morphology-based enterprise search in texts, files and media content across the organization's intranet.
7	I want effective work with freelancers and partners	Integrated extranet module containing almost all communication and collaboration features used for internal purposes.
8	I want all my systems to work in concert	Integration with Office applications, Outlook, Active Directory/LDAP, virtually unlimited compliance with enterprise applications (ERP, CRM, SCM, etc.), source code availability.
9	I want my digital assets to be reliably protected	Industry-leading security framework comprised of a number of must-have technologies like web application firewall, web anti-virus, one-time password and anti-phishing.
10	I don't want my intranet to eat all my IT budget!	Affordable pricing PLUS major savings provided through: moderate hardware requirements, no extra software expenses, and no extra staff overheads. You will certainly like our TCO/ROI indicators.

# Bitrix® Intranet Portal benefits

There are dozens of reasonable arguments concerning who really needs an intranet solution and why. Naturally, every employee can benefit from the intranet regardless of position and individual needs. So can your business as a whole.

## CEO/CFO/Owner

### ✓ Improve decision-making

Be aware of the current activity of individuals and workgroups and enjoy instant pervasive internal communications. As a result, mission critical decision are more relevant and require less time.

### ✓ Maximize employee efficiency

Organize employees in workgroups with powerful collaboration tools and capitalize on creative communities. Accumulate knowledge and attain its maximum continuity and availability with centralized data storage and optimal internal communications.

### ✓ Monitor performance

An intranet is your chance to have a deeper look at your business performance and reach a new level of business transparency. With a number of click-away features and customized personal KPIs, you get immediate reporting and instant insight.

### ✓ Design and control business processes

Business process automation brings down the chaos inherent in non-Enterprise 2.0 organizations. Convert chaotic routines into clearly-described and controlled processes where everyone knows what to do with no chance to escape responsibility.

### ✓ Protect investments

An employee leaves the company with little or no trace of his/her knowledge. Sound familiar? The intranet preserves accumulated knowledge and keeps track of each employee's activity. It gives you peace of mind about knowledge continuity as well as your business development investments.

## HR management

### ✓ **Maintain enterprise-wide time management**

An intranet is a perfect tool to track employee absence and availability. You can easily see who is in and out, who is performing and who is not.

### ✓ **Fast orientation for new employees**

Intranet quickly converts newbies into qualified and well-informed employees. They can learn procedures and rules, see colleagues' profiles and get a proper understanding of the company's structure and business with the personnel and official document directory.

### ✓ **Achieve increased employee engagement and motivation**

The social dimension of the intranet transforms the boring day-to-day routine into captivating creative activity for employees, solidifying the team and letting every member contribute to business development. Carry out rumor control and staff programs with extensive corporate broadcasting features.

### ✓ **Idea management**

Powerful social networking tools enable the discovering of creative people, defining of team leaders and tracking of brilliant ideas that will boost your business.

### ✓ **Training and certification**

Increase staff qualifications and find the people who really want to grow with the intranet's rich eLearning capabilities. Track certification performance and see the training history of each employee.

*Online communities are turning into a vital new channel for innovation, business agility, customer relationships, and productive output for most organizations. This is one of the most potent new ways to achieve business objectives, both in terms of cost and quality.*

*Dion Hinchcliffe  
Enterprise architect and  
business strategist*

# Bitrix® Intranet Portal benefits

## CIO/ IT staff

### ✓ Minimize implementation time and costs

Deploy the intranet solution with minimum hassle in a matter of hours at an affordable price. The ready-made environment, optimized settings and demo data enable you to understand how the system works easily and make it available for business use in the shortest time.

### ✓ Integration with IT-infrastructure

The intranet solution works in concert with your existing IT infrastructure and allows you to consolidate scattered data from different sources. Enjoy seamless integration with Active Directory/LDAP, Office applications, ERP, SCM, PLM and other third-party applications, and compatibility with virtual environment.

### ✓ Follow your corporate IT standards

The Bitrix solution is a cross-platform web application that can be deployed on different operating systems and use a wide range of databases to meet your existing IT standards.

### ✓ Scale, enhance and monitor

Get a high-quality experience with centralized system management, performance monitoring, built-in security framework and scale the solution according to new business challenges and performance requirements.

### ✓ Optimize costs

Bitrix® Intranet Portal is an affordable solution that requires minimal hardware and software resources beyond typical network infrastructure. The resulting collaboration and continuity possibilities create benefits which would otherwise be unattainable, making the overall project a major advance in operational efficiency with a moderate, or even minor, financial investment.

*Well-crafted, focused Enterprise 2.0 frameworks formulated to clear objectives enable organizations to identify and assemble appropriately connected teams across the globe to interlock and wrap around discrete business challenges and opportunities.*

*Sameer Patel and Oliver Marks  
Sovos Group*

## Employees

### ✓ Do more in less time

With powerful data discovery, storage and sharing capabilities, comprehensive collaboration and communication tools, you can increase your performance tremendously, accomplishing more work and getting footing for promotions.

### ✓ Lighten your workload

An intranet makes your work easier. With a built-in instant messenger, e-mail, video conferencing and the rest of the rich functionality, many of the time-consuming parts of daily work simply fall away, eliminated by access to a unified information and communication resource. The 'daily grind' becomes much less grinding.

### ✓ Get involved

Easily see what's going on in the organization with continuous news feeds and group updates, meet the team, understand corporate values, and get oriented about internal rules with only a couple of clicks.

### ✓ Socialize for business purposes

Be an active part of a collective mind to produce brilliant ideas and facilitate business development. Be a part of the team and enjoy your input in the business.

### ✓ Create your personal workspace

Customize your individual dashboard to act as a control center for tracking external news, internal communications, events, notifications, reports and getting instant insight on current tasks.

## Primary business drivers behind Enterprise 2.0 initiative

*The 2.0 Adoption Council*

# Employee Directory

With your organization growing, people don't always stop to recognize their colleagues. Normally they say 'hello' without even a clue about who the person is! New employees experience significant difficulties getting to know new faces. As a result, your internal communications fail to achieve the strategic goal of solidifying the team to work in concert.

Rich employee profiles provide an immediate snapshot of each employee, their department and position, contact details, personal information, pending tasks, workgroup participation, absence announcements and public calendar. This tool carries an extensive social dimension as people can share photo, video and music, keep an individual blog, initiate forum discussions and grow a friends network.

Employees can set up specific access rights for other people looking at their profiles, enable or disable certain functionality, manage following up specific intranet events and notifications, customize the appearance of the profile by drag-and-dropping sections.

*Employee directory gives a comprehensive insight into the organization's structure*

*Rich employee profiles contain extensive contact details, personal media gallery and social environment.*

*Bitrix Intranet Portal ensures fast orientation for new employees*

## Corporate Insight and Broadcasting

Your team is as effective as your guidance. Let employees learn the latest news, announcements and event calendar, get instant access to standard documents and company details.

Familiarize them with adopted corporate rules, procedures and official instructions, and create a unified view on corporate values, history and market positioning. Acquaint people with the structure and hierarchy with automatic organization chart generation.

Strengthen the team spirit and increase personnel involvement and awareness with a hall of fame, best performers, birthdays and announcements of special events, broadcasting media content, publishing photos and videos, all wrapped in highly-customizable page layouts reflecting your branding and corporate values.

*The automatic organization chart gives an instant snapshot of your company's structure*

*The 'Company' section contains official news and announcements to strengthen team spirit and spread corporate values*

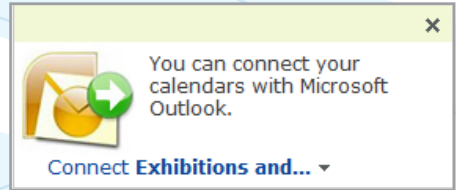

# Time Planning and Calendaring

Teamwork is all about effective scheduling and synchronization. Clear understanding of who is doing what allows for coordinated activity and concentrated effort to attain best performance results.

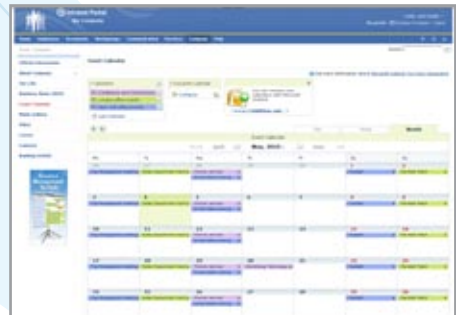

Bitrix® Intranet Portal powers your organization with a wide range of time-planning and calendaring tools.

Create an unlimited number of personal and workgroup calendars with flexible access rights management and two-way alignment with the organization's main calendar. Enjoy bi-directional calendar synchronization with Microsoft Outlook and let every employee maintain a personally configurable chart comprised of selected calendars.

The unified absence chart gives employees a comprehensive look at their colleagues' availability for more effective scheduling important meetings, tasks and events. It consolidates data from personal calendars and gives unified click-away information about reported vacations, leaves, business trips. HR managers can easily carry out employees' personal absence charts and create time management reports.

*Enterprise absence chart gathers events from private and public calendars with "out-of-the-office" status*

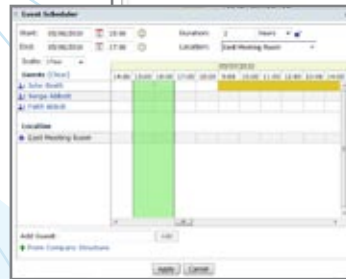

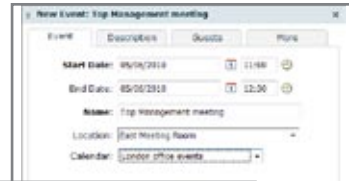

*Customized calendar view contents*

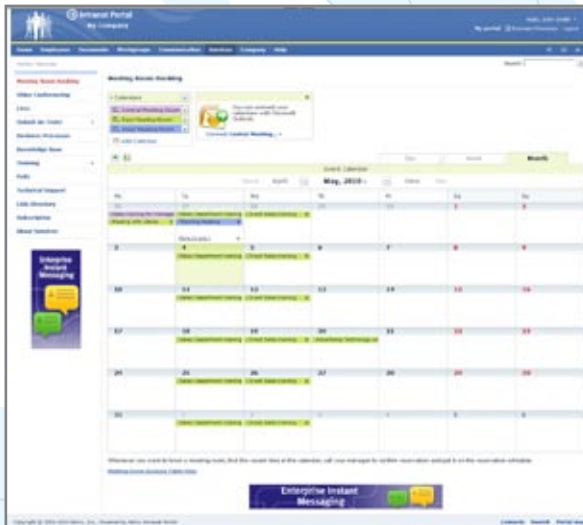

# Time Planning and Calendaring

Schedule events with one button click and supply their detailed description with the feature-rich WYSIWYG-editor. Invite people directly from the organization structure, check their availability with the intuitive event planner to find the optimal timeslot, track confirmations and send reminders.

Manage events with the flexible resource planning, meeting-room booking, real-time calendar updating and follow-up. Create recurring events with customized priority levels and privacy settings. Take advantage of multi-channel notifications via e-mail, instant messenger and intranet dashboard to make sure no one misses an important meeting and everybody stays tuned.

*Click-away event planner with time management, WYSIWYG-editor, availability matching and participant notifications*

*Meeting room booking capability manages use of your office facilities*

# Information Discovery

Information is a gateway to new business opportunities, and access to information is a key to this gateway. Bitrix® Intranet Portal is powered by the D.I.G.™ enterprise search engine - the industry-leading tool for fast and accurate location of required data across an organization's digital assets.

D.I.G.™ scans texts, media content and documents while looking for morphological stems and evaluating their density. Coupled with the original Bitrix compression technique, this approach provides up to a 10-fold increase in performance and much better result relevance. The engine natively supports Microsoft Office, OpenOffice.org and Adobe Acrobat formats and filters search results with respect to the user access rights.

D.I.G.™ offers immediate automatic data indexing, making content searchable right after its submission. Users may create complex search queries using query language, inclusion/exclusion masks and logic operators, as well as choose specific site sections for a highly targeted search.

Full-text morphological multi-lingual enterprise search in text, documents and media content

Search results are displayed according to user access rights and settings

Annual cost of non-productive hours like ineffective search, recreating the content that can't be found and reformat data from multiple sources reaches \$22,000 per employee.

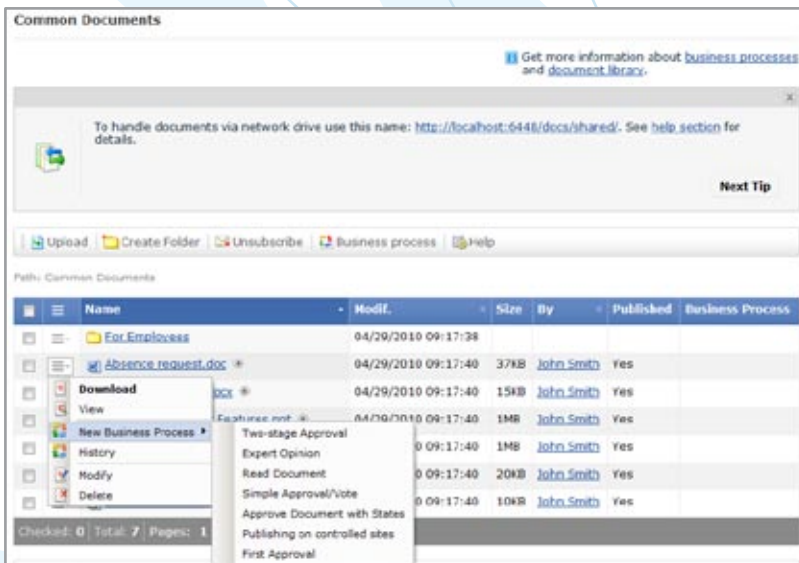

IDC Information Worker Productivity Studies, 2008-2009

## Document workflow

Relying on shared network drives and e-mail based collaboration systems inevitably results in ever-growing, unstructured information silos, most often referred to as a data dump. Allowing employees to maintain valuable documents on local drives without sharing them across the organization leads to even more trouble. From lower productivity and business inefficiency and duplicating work to embarrassing security and compliance issues when critical data is lost or misused, not having a least some kind of centralized data store is an even worse option.

Bitrix® IntranetPortal offers a comprehensive yet easy-to-use workflow management system that lets you store, organize and share documents and address critical knowledge continuity and security issues.

Employees and workgroups simply move their workflow documents to intranet file storages featuring shared access, versioning, roll-back, backup, instant editing, forum discussions and immediate indexing for enterprise search.

*The document workflow system allows users to organize, store, and share files*

# Document workflow

Users can take advantage of click-away connection to intranet file storages as network drives, as well as integrate resided documents with text processors, spreadsheet editors and presentation programs, batch upload and WebDAV support.

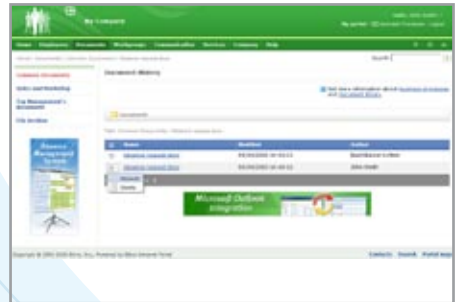

Workgroup members and stakeholders can easily follow documents and receive notifications via e-mail, instant messenger or online portal reminders.

Easily connect and disconnect remote data storages and make them available for selected intranet users without overloading the portal database.

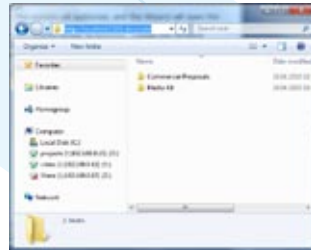

Launch a pre-set template or design a custom business process to involve various parties in document approval, discussion and processing. For example, initiate an invoice payment with multi-stage processing by various departments and stakeholders, monitor progress, get updates and reporting and store the history for future reference.

*Batch file uploading allows quick transfer of documents to the proper intranet storages*

*Workflow with document versioning, roll-back, backup and instant editing*

*You can connect an intranet storage as a network drive in a matter of seconds»*

# Workgroups

Collective intelligence beats individuals. With the proper tools in place, results are even better. BIP workgroups provide the right combination of cutting edge technology with intuitive features help you create highly-productive communities and supply them with the flexibility that they need.

Bitrix® Intranet Portal contains all the necessary features required for result-oriented and transparent collective work. Importantly, it can help you stop the uncontrolled spread of data among users' computers and prevent drowning in personal e-mail boxes and storage silos. Workgroups give you a powerful tool to concentrate knowledge in a single, manageable, searchable and secure place, just as it should be.

Bitrix workgroups are similar to real-life workgroups with moderators, members,

dedicated file storage, discussion forums, photo galleries and reports. Group owners flexibly define access rights for members and other intranet users, making the whole group or some of its features private or public.

All workgroup activities and workflow are carefully logged, eliminating the risk of data loss. Supervisors can easily see project progress, best performers and bottlenecks, as well as troubleshoot typical problems, monitor deadlines and mark milestones. Completed projects just can be archived for future references.

Dedicated workgroup task and time management is tightly integrated with the members' calendars, contributing to the enterprise-wide absence chart and informing colleagues about availability. And of course direct notifications will ensure that no one misses important workgroups events!

*Workgroups include a wide range of tools for project-based work including discussions, file storing and sharing, time management, and calendaring, enhanced with a progress bar and reporting.*

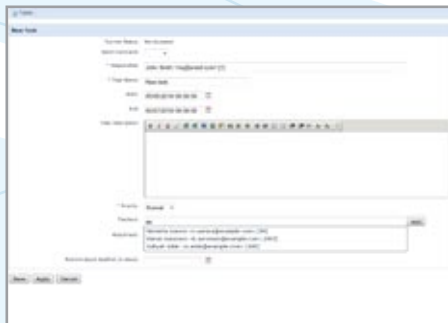

## Task Management

The proper defining of a task and proper supervision is the key to solving it. This is a simple maxim which, it seems, is beyond dispute. However, in the real world, even the proverb about not putting the cart before the horse gets violated all the time.

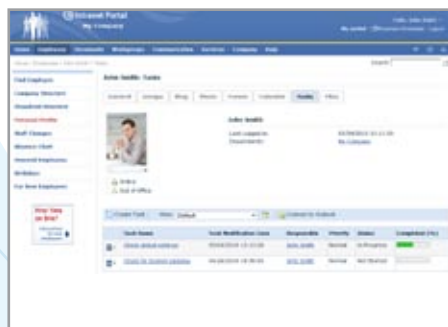

With the Bitrix® Intranet Portal's task management capabilities, you will tremendously increase workforce productivity, project transparency and overall business performance. Just imagine how convenient it is for each employee and workgroup to have their own dedicated list of tasks, notifications about their development, clear deadlines and milestones, progress bar and custom files repository. All this, and the boss gets deep insight into each task.

Self-defined and cross-defined tasks carry an extensive accompanying description, history, supplemental documents and forum discussions. Users can assign responsible parties and followers, create a custom task appearance (including real-time Gantt charts), and easily initiate two-way task synchronization with Outlook.

While all of this is happening, employees keep continuously-updated progress reports using an integrated WYSIWYG-editor and the option to attach report files when tasks are completed. You can always see who did what and how much time they spent on the job.

*A simple click-away action specifies task details including responsible parties and followers, descriptions and progress bar.*

*Personal and workgroup tasks increase workforce productivity, project transparency and enable business performance monitoring*

## Internal Communications

Live employee interaction speeds up decision-making and makes it more relevant, incorporating the best ideas and harnessing the social dimension of your organization. The opportunity to initiate an instant contact with a colleague or a group of colleagues is increasingly important for geographically distributed organizations and remote workers.

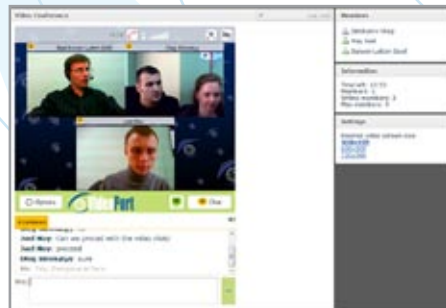

Bitrix is an acknowledged leader in providing customers with unified communications services integrated into the intranet. With Bitrix® Intranet Portal, you can get a high-quality experience and increase workforce productivity with instant or group video conferencing, e-mail processing, integrated instant messaging server, online portal messaging and rich social networking tools such as blogs and forums.

With this unparalleled functionality, employees significantly extend their communication opportunities, enabling extreme availability and connectivity. They can chat via instant messenger from a mobile device or a smartphone, participate in discussions via e-mail without logging into the intranet and meet up with other team members while at opposite ends of the Earth.

And it really doesn't matter what environment they use. Our intranet is 100% web-based and can be accessed from Windows, Mac OS, Linux, Android, iPhone, Blackberry, Symbian or Palm devices!

*Instant messaging is available in the portal, through any jabber compatible pager, on PC/Mac and mobile devices. No additional software is required*

*Initiate instant peer-to-peer video calls or group video conferences for up to six participants*

# Extranet

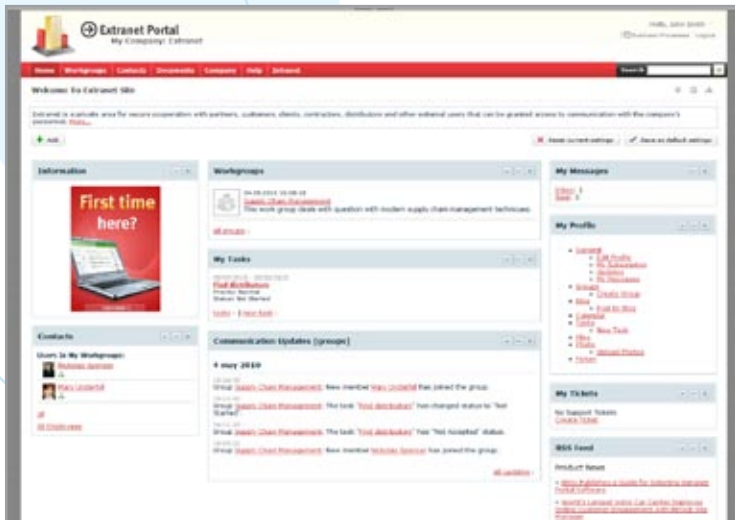

An extranet is similar to an intranet. The difference is that it is designed for external parties like partners, suppliers, prospects and freelancers. These are people you want to work with, but cannot have access to your valuable intranet assets.

The extranet module of Bitrix® Intranet Portal allows you to create secure, customized areas with their own look and feel, send invitations to external users and implement the same communications and collaboration features that you do in the intranet.

Intranet and extranet users can participate

in workgroups, share documents and news, keep blogs and seek the truth in discussions, manage tasks and calendars, search for critical information, get instant channeled notifications, socialize, post reports and monitor project development.

All in a secure and user-friendly environment.

*Extranet enables effective communications and collaboration with external parties without exposing your intranet assets*

## Business Processes

Tired of tons of paperwork? Not satisfied with employee performance? Lack transparent reporting and monitoring? Annoyed that people fail to do their job on time? We agree that these things just don't have to be that way. You simply need the proper tool to manage business processes in one place and finally get rid of the chaos inherent in non-Enterprise 2.0 organizations.

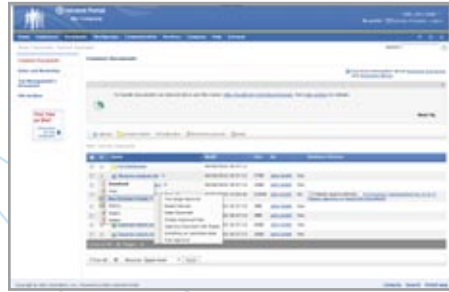

Bitrix® Intranet Portal allows easy business process design and deployment across the organization. The feature uses intuitive drag-and-drop actions to visualize the process construction, synchronize people and departments, and promptly automate routine activities.

Alternatively, you can use the pre-set templates for typical activity like business trips, vacation request handling, and multi-stage approval for document publishing.

A business process may be launched in a second by an average user with no technical staff involved. Thus, businesses can significantly improve intranet ROI by boosting employee productivity, internal interoperability, and user satisfaction.

A business process can be initiated in relation to a document or a routine activity, and owners can modify the process at any stage of its implementation; users can receive assignments directly to their calendars and tasks as well as receive notifications via instant messenger or e-mail.

Really, streamlining important business processes has never been this easy.

*You can initiate a business process based on a certain document or an activity*

*The business process module automates internal routine activities, streamlines decision-making and puts all stages of the given operation under control*

*Visual construction with drag-and-drop capability puts the most comprehensive business process design within your reach*

# The World Is Not Enough

Bitrix® Intranet Portal is full of other functions and features to bring your internal business communications to a brand new level of transparency and efficiency. Here is only the tip of this iceberg:

## Media Content Management

Enliven your intranet! Accumulate, organize, edit and share photos and videos with integrated media galleries.

## Polls & Surveys

Feel the pulse of the team, test new ideas, see your organization's bottlenecks and identify problems.

## Training & Certification

Educate personnel with the integrated e-Learning module. Import and export training courses in IMS CP and IMS QTI formats. Perform testing and maintain a history of certifications. See the best performers and identify team leaders.

## Internet Connection

Power your intranet with external RSS news feeds, Google gadgets and custom widgets like world clock, traffic info, weather forecasts and stock exchange reports.

## Channeled notifications

Keep your employees in tune with the latest developments with real-time event notifications and reminders via instant messenger, e-mail and online portal messages.

## Custom Look and Feel

Customize the appearance of your intranet by including your logo, motto, and design templates changing the menu structure with easy content management features.

## Intranet Assets Protection

Benefit from the industry-leading, independently certified and road-tested PRO+PRO™ security framework that includes a number of must-have technologies including web application firewall, web anti-virus, one-time passwords, abnormal activity blocker and anti-phishing.

## Access Management

Leverage the powerful user permission management system that allows crafting of access permissions to certain sections, pages and even page objects in the most flexible manner.

## Click-Away Updates

Keep your intranet updated to get the latest features, fixes and security updates. The SiteUpdate module automatically notifies you about the new updates and allows automatic download with only one click.

## User-Friendly Back-End

The intuitive back-end of Bitrix products increases productivity among administrators and content contributors who can leverage the extreme usability, adaptive interface, numerous quick-access features, and familiar editing tools.

## Centralized Administration

The Site Controller module enables centralized administration of distributed Bitrix installations, connects remote offices and users into a solid workspace, and allows data exchange among internet, intranet and extranet layers.

## Flexibility and Integration

The availability of source code gives the opportunity to customize a solution to meet your specific business needs. A well-documented API allows for virtually unlimited compliance with third-party enterprise applications like ERP, CRM and SCM.

## The Choice Is Yours

Bitrix has been developing content management solutions since 1998. Bitrix® Intranet Portal is our flagship product with 70+ highly-skilled professionals concentrating their development, support and marketing efforts on it. As a result of many years of continuous enhancements, the product has gained extensive functionality, bringing it to the top of the performers' list in the market focused on small and medium-sized businesses.

There are a number of intranet products in the market that aim at the same target audience and claim to provide functionality similar to Bitrix® Intranet Portal.

The table below demonstrates a side-by-side comparison of several intranet solutions for a typical organization with 100 users. It will certainly help you to make the right decision. Just look at how products perform by various parameters and how they meet your budget restrictions.

The comparison is based on a number of criteria to meet the requirements of the evolving Enterprise 2.0 market. The criteria are grouped into several sections to reflect task-oriented functionality. Points are calculated according to the given feature's presence and performance. The red color shows the best performer.

The information was taken from official sources and conforms to the functionality of trial versions of available software.

# Intranet Is Easy

Intranet deployment is really easy if it is Bitrix® Intranet Portal. In fact, the unique combination of functionality and ease of use is our main competitive advantage. And it has proven to be the right position with over 30,000 business customers around the world.

Installation, configuration and launch of Bitrix® Intranet Portal , together, take only about twelve working hours! Here is a real life calculation for an organization of 300 users derived from our many years of experience.

Hardware setup (1h)

Software environment setup (5h)

Bitrix installation (1h)

Bitrix configuration (30m)

Bitrix integration (30m)

Intranet layout customization (1h)

Intranet content population (3h)

**TIME TO LAUNCH:  
12 HOURS\***

\* Implementation time for typical organization with 300 intranet users.  
The actual time may vary.

# Intranet Is Affordable

You have probably heard about organizations spending hundreds of thousands or even millions of dollars on intranet solutions. Well, let's leave them with these unjustified expenses. At Bitrix, we believe that an intranet should be as affordable as an e-mail server and become as much of a staple of office technology as anti-virus software.

An intranet boosts your business. It makes work easier and captivating. An intranet is

a self-sufficient business communications tool. Once you try it, you will never stop admiring its capabilities and business benefits.

With Bitrix® Intranet Portal, you can significantly cut expenses associated with intranet acquisition, deployment and maintenance.

- ✓ Affordable pricing
- ✓ No staff training
- ✓ Minimal IT staff involvement
- ✓ No need for external consultants
- ✓ No additional software expenses
- ✓ Moderate hardware requirements
- ✓ Minimum maintenance costs

Still not convinced? Try out our online TCO and ROI calculator based on thousands of carefully examined intranet projects.
