

## Improve Your System With Transactional Capture

Whether you are a small medical practice or a multi-site provider, as a healthcare professional, you want to provide the best possible care for your patients. To administer that quality care, you and your

staff need access to all critical information regarding your patients. A patient fills out paper intake forms, a doctor Faxes records on past care, a lab sends an electronic report. Regardless of origin, the patient record needs to reflect the complete picture so you can recommend a course of treatment.

Regardless of the size of your organization, One Touch offers solutions that seamlessly integrate into any healthcare application, database, back office system or workflow.

While patient care drives the need for accurate, up-to-date and easy-to-access patient information, the business side of your practice benefits as well. Your billing department has to properly code and bill for services, and documents must be retained for compliance purposes.

Whatever the reasons, you want collecting that information to be as quick, and cost-effective as possible, keeping the focus on providing top-notch medical services while maintaining efficient back office processes to manage revenue cycles and fulfill release of information requests. The One Touch solution enables clinics, outpatient surgery centers, medical practices and all

other types of healthcare facilities to:

- **Create a comprehensive medical record with paper, fax and electronic data**
- **Improve care and patient safety with immediate access to the latest medical record content**
- **Ensure compliance by quickly securing all record data quickly and protecting access**
- **Cut costs through eliminating paper, reducing storage space and refocusing staff time on more productive tasks**
- **Speed revenue cycles through quicker access to coding and billing data**
- **Big results with a small footprint requiring minimal space.**

**Drive top-notch  
medical services and  
efficient back office  
processes with  
accurate, up-to-date  
and easy-to-access  
patient information.**

With the One Touch solution, you can easily integrate scanned and faxed documents right into your EMR, EHR, ERP, ECM, document management system as you receive them. Your staff no longer has to search through paper files looking for documents, wait while someone else reviews a file or worry that documents might be missing or misfiled. Additionally, staff in satellite clinics has immediate access to files that can be critical if a patient needs to visit more than one office for treatment.

### **Who is One Touch Global Technologies**

One Touch Global Technologies understands how to integrate documents into business workflows. For almost 20 years, One Touch Global Technologies has provided leading-edge solutions to thousands of users processing millions of business-critical documents. Some of the top names in the healthcare, pharmaceutical, financial services, banking, transportation and government spaces rely daily on One Touch Global Technologies solutions.
