

Calpont and Jinfonet Announce Partnership to Speed Reporting for Big Data

Partnership Pairs the Power of Jinfonet's JReport Web Reporting with Calpont's InfiniDB Analytic Database

Frisco, TX and Rockville, MD – February 9, 2011 – [Calpont Corporation](#), a leading provider of high-performance analytic databases, and [Jinfonet Software](#), a leader in Java reporting, announced a partnership to bring fast web query, reporting and analytic solutions to market. A joint solution with Calpont InfiniDB and Jinfonet's JReport makes perfect sense for companies that are looking for a scalable analytic and business intelligence (BI) reporting platform that can easily grow with their business.

JReport's web reporting software provides the ultimate flexibility for BI across the enterprise, giving users the ability to access and generate reports on any browser-based device from any location. InfiniDB's columnar database design is an ideal complement, as it helps companies achieve the underlying fast data loading necessary for web reporting, and is critical for optimized query response time in complex multi-dimensional analytics.

"Many customers have chosen JReport based on benchmarks for performance and scalability. JReport is the leading Java BI tool available for accessing operational data stored in production relational database management systems. JReport provides the speed and scalability for reporting well beyond the practical size limits of traditional relational systems," said Greg Harris, senior product manager at Jinfonet Software. "JReport can run predefined or ad hoc reports with databases from a few terabytes to hundreds of terabytes by utilizing the columnar, scale-out architecture of InfiniDB. No matter how large the reporting data becomes, the synergy of these two best of breed products enables customers to address their BI requirements now and into the future."

InfiniDB is a column oriented database that is specifically designed for analytics. It overcomes query limitations that exist in traditional relational database management systems (RDBMS) by storing, managing, and querying data based on columns rather than rows. Because only the necessary columns in a query are accessed rather than entire rows, input/output (I/O) activities, as well as overall query response times, can be reduced dramatically.

"Rapid results to critical decision analyses are an ever growing issue because of the enormity of analytic data today, the desire to use more of that data than before, and the increasing trend toward highly dimensional and granular queries. InfiniDB is designed to handle the scaling data and demanding workloads put upon BI and advanced analytic data marts and warehouses," said Nick Ochoa, vice president of marketing for Calpont. "InfiniDB, combined with a leading web reporting software like JReport, delivers fast analytics against enormous volumes of data across extended enterprises, regardless of location or device."

As analytic data and querying needs grow, InfiniDB and JReport are easy solutions to expand, as the performance of both scales linearly with the addition of commodity server hardware. This flexible and robust infrastructure helps guarantee that service level commitments and optimal asset utilization levels for web reporting are met well into the future.

About Jinfonet Software

Jinfonet Software is the leading provider of embedded reporting solutions for enterprise applications. JReport, the company's flagship product, is a Java-based reporting solution that can embed seamlessly into any Java application, leverages Java EE standards, and delivers interactive reports via the web. JReport's intuitive design and deployment tools make report creation, review, distribution and ad hoc reporting fast and easy. JReport is in its 10th release cycle and is employed by hundreds of thousands of end-users at more than 10,000 installations worldwide.

More information on Jinfonet Software and JReport is available online at <http://www.jinfonet.com>.

About Calpont

Calpont Corporation is a provider of scalable, high-performance column-oriented analytic databases enabling ultra-fast, deep analysis of massive data sets. InfiniDB Enterprise is the emerging choice for demanding data warehouse, business intelligence, reporting, and analytic deployments. Known for its rapid implementation time, unmatched operational simplicity and extraordinary value, InfiniDB provides a proven solution for data-intensive businesses, including those in the software, online business, telecom, and social spheres. For more information, please visit www.calpont.com, join our open source community at www.infinidb.org, or follow us at twitter.com/calpont.
