

## Need An Easier Way to Work With Your Data?

**Problem:** Data can be difficult to work with. It exists in multiple locations and formats, it's never clean, and takes forever to create or modify reports or ad-hoc analysis.

**Solution:** Overcome barriers to data extraction, ad-hoc analysis and reporting. Powered by Rapid Insight's *Dataflo3G™* technology, Veera easily and quickly turns raw data into actionable information. Visually based - create, save, share, and explain your reporting processes.

- **Easily map connections to all of your data**

Use these connections repeatedly in as many data jobs as you'd like. No need to import data into a proprietary format. Rapid Insight's Dataflo3G technology allows data to be kept in its existing location, streaming data directly from original tables and files to defined outputs and reports.

- **Integrate data from disparate sources and formats**

Merge data from spreadsheets, database tables, and text files. Veera doesn't discriminate against the data. Merge, append, integrate and aggregate any and all data as if it was originating from one source.

- **Quickly create reports and perform ad-hoc analyses**

Create a quick report or an extremely complex ad-hoc analysis, Veera makes the process extremely efficient. By enabling users to create and save an analytic process, Veera makes it very easy to modify or change any report or analysis as quickly as the question changes.

- **Trust your data and facilitate data driven decisions**

By creating a visual picture of the data process, users are able to quickly detect and correct errors in reporting processes. With other analytic tools, these errors often go undetected.
