Oxygen Software Focuses on Smart Phone Forensics with Oxygen Forensic Suite 2011 and Makes It Free for Law Enforcement

Now forensic experts can view information about mobile applications, identify and map geographic coordinates of the suspect by GPRS/3G connections, extract passwords from mobile dictionaries and more

MOSCOW, Russia – February 15, 2011 – Oxygen Software today announces Oxygen Forensic Suite 2011, a major upgrade of the popular forensic software suite that gives investigators breakthrough ways to extract and analyze data from a smart phone of a suspect. Now experts can view detailed information about preinstalled and custom applications, including run time stamps and logins to corresponding online services; find out the location of the suspect by GPRS/3G connections; get passwords and other important data from dictionaries. The release adds support for 100+ new devices and about 50 minor changes. Law enforcement specialists can get the product for free.

"With more than 170 million smart phones bought last year and even more expected in 2011, we do see the need to make smart phone forensics top priority on our agenda", says Nickolay Golubev, marketing communications manager, Oxygen Software. "In response to this need, we are introducing Oxygen Forensic Suite 2011, which provides forensic experts with dedicated tools to collect and examine digital evidence from smart phones, from the new application data analysis section, to the tools for analyzing mobile dictionaries and connections."

Oxygen Forensic Suite 2011 introduces a new section called Application, which allows the investigator to view information about preinstalled and custom applications, such as their installation and run time stamps, logins and passwords to corresponding online services. Currently, supported services include YouTube, MySpace, Facebook, AOL, Flickr, Tumblr, LinkedIn, Blogger, ICQ, Yahoo!, Livejournal and others. Also it is possible to view the history of visited web pages and history of conversations over Skype, ICQ and other instant messengers. In certain cases the program makes it even possible to get geographic coordinates of the location when a particular application was launched. The Application section is available in the Analyst license and for Apple devices at this time.

The Dictionaries section is another novelty in version 2011. Working in a similar way as a keyboard logger, this tool captures all words entered by the suspect while typing messages and notes. Captured words can help the investigator to reveal passwords and other valuable data. The Dictionaries section also allows the expert to find out the usage frequency of each word, reveal the order words were entered and compose phrases of these words. The Dictionaries feature is available in the Analyst license for Apple, Android and Blackberry devices.

The developers also added the IP Connections tab that serves as a logical extension of the popular Wi-Fi connections section. On this tab, one can find out the location of the suspect by GPRS/3G connections and review such information as the history of router connections, router details (MAC address, IP address), provider name, region and more. Using the extracted IP data, the tool shows the location of a suspect on Google Mini Map.

Oxygen Forensic Suite 2011 offers a redesigned interface. Navigating between the sections, cases and phones has become easier and more convenient now with a new navigation system that resembles Windows Explorer. The old device tabs have been replaced by the Device and Cases panel where smart phones are grouped by cases. The user can drag and drop a device to add it to a case, edit device details and tag smart phones for quick search.

Oxygen Forensic Suite 2011 is available immediately at http://www.oxygen-forensic.com

Pricing & Availability

Oxygen Forensic Suite 2011 is available for FREE until March 1st, 2011 and for $799 after this date through the Oxygen Software Store (http://www.oxygen-forensic.com), and Oxygen's Authorized Resellers: TEEL Technologies (USA and

Canada) and Data Duplication Ltd (UK and Europe). A free 30-day trial version, list of supported handset models, demos, documentation and additional downloads for Oxygen Forensic Suite can be found at http://www.oxygen-forensic.com

About Oxygen Software

Founded in 2000, Oxygen Software provides innovative PC software for cell phones and smart phones, including advanced tools for forensic investigation. The company is the author of Oxygen Forensic Suite, Oxygen Express for Nokia phones and Oxygen Phone Manager II for Symbian OS smart phones (all Symbian smart phones supported - Nokia, Sony Ericsson, Motorola, Samsung, etc). Oxygen Software is an official member of Forum Nokia developers community. For more information, please visit www.oxygensoftware.com
