Keep your data secure 24 by7 through RAIDRecoveryOnline.com

RAIDRecoveryOnline.com now proudly announces the launch of their state-of-the-art remote RAID recovery service, a service that allows remote data recovery from all RAID types. RAIDRecoveryOnline.com uses its proprietary algorithms to recover data from failed RAID drives which is a free diagnostic procedure. With or without the RAID Controller remote RAID recovery can be done without the data having to move from the customer's premises. Whether it is an issue with software or hardware RAID, RAID recovery can always be done in a safe and hassle free mode.

As a client, a business does not need to know about the process involved with RAID data recovery. Service providers today have a set of tools that can diagnose the problem in a matter of minutes. These tools can also figure out the RAID configuration automatically and start working on the ideal way to recover data.

Remote RAID recovery can be done for all types of RAID arrays – software, hardware and motherboard controlled. The only thing that the client has to do is to connect the corrupted drives to another machine. It also does not matter whether the client system has RAID 0, 1, 5 or 6. A high level of automation ensures detection, correction, recovery and rebuilding, if it is necessary. The client will also receive a free file list for the recoverable ones.

24 by 7 access

RAID failure can either be predicted or not predicted. When RAID hard drives are used for a long time they go through natural degradation and can fail. Sudden power surges can also damage RAID drives and these can never be predicted. What a customer wants in a situation like this is to have access to 24 by 7 support. RRO, through their newly launched remote RAID recovery services can now connect with the failed system with their experienced engineers and have the RAID data recovered over a secure online connection.

Value for money

Businesses today have access to plenty of professional RAID recovery services. The competition among the service providers is huge and the most professional service providers manage to balance price and quality. At the end of the day, businesses look for reliable and fast solutions at an affordable cost. Since remote RAID recovery is done online and there is no need for data or RAID hardware transportation, it can be done at an optimum cost.

About RRO

RAIDRecoveryOnline.com or RRO is a partner of Tic Tac Data Recovery, the global leader in RAID data recovery for the past 15 years. International and well renowned brands like Microsoft, Dell, Intel, IBM and many more are some of the illustrious clients of the company. You can connect with RRO by pasting RAIDRecoverOnline.com on your web browser.
