

Interactivate+

Mathematics Courseware for 21st Century Learning and Instruction

Schools and parents alike are using computer-based, interactive tools to supplement classroom instruction, gauge progress and evaluate results. Not only do these tools enable a greater understanding of learners' abilities and areas of improvement, but they are proven to be a win for both students and school districts. Students today think digitally and respond positively to technology that is integrated into their daily activities. The use of computers, smart phones, tablets and netbooks to explore and learn has increased significantly in the last few years. Now, more than ever before, introducing technology-based educational tools will be an essential element in the way children study and improve their performance.

A recent U.S. Department of Education study showed that online students outperformed those receiving only face-to-face instruction.

You Do the Math:

Blended Learning + Intervention = Improved Test Scores

Developed in collaboration with classroom instructors, content experts, curriculum designers and educational technologists, **Interactivate+** is a web-based blended learning environment and intervention tool that provides:

- **Students** with interactive, exploratory skills-based learning and a collaborative online environment, creating excitement and motivation while improving math comprehension.
- **Teachers** with instructional material so they can easily incorporate activities into their curriculum.
- **Administers, teachers and parents** with pre- and post-assessment baselines and performance tracking and reporting to determine a learner's proficiency and zero in on what level and type of intervention is necessary.
