Advanced Conferencing Solutions from Telcodepot.com

The Konftel 300 Conferencing Phone

Telco Depot, your preferred telecommunications partner, has always led the way in providing quality service with our industry-leading expertise in IP PBX Phone Systems and Support Services.

The Konftel 300 is packed with smart features and has been developed for flexible application. You can record your calls onto an SD memory card and the line selector mode allows you to switch between and combine three connectivity technologies, analogue, mobile phone and USB. The conference guide is a useful feature if you make regular calls to the same group as it enables you to set up multiparty calls and save call groups.

The Konftel 300 is also ideal in larger contexts as you have the option of adding expansion microphones, a wireless headset and an existing PA system too. It goes without saying that it delivers ultimate sound quality, based on OmniSound[®] 2.0, the new generation of Konftel's crystal clear audio technology.

The conference guide makes life easier

The conference guide stores as many as 20 groups and greatly simplifies the task of setting up regular teleconferences. Individual contacts are saved in the phonebook

Switch and combine connections

Thanks to the line mode, you can easily combine and switch between connections to analogue lines, mobile phones or PCs for VoIP.

Record your meetings

The Konftel 300 supports SD memory cards, which means that you can record meetings and listen to them afterwards.

Extension capacity for larger rooms

Expansion microphones effectively double the voice pickup range. You can also connect a wireless headset or connect the Konftel 300 to external loudspeakers and microphones (PA system).

Future-proof

The Konftel 300 is future-proof. This is because you will always be able to upgrade the phone and add new, innovative features via our website at www.Telcodepot.com

Advantages of the Konftel 300:

- A new generation of OmniSound® audio technology.
- USB connection for VoIP calls.
- The line mode makes it easy for you to combine and switch between connectivity technologies (analogue, USB, GSM).
- The conference guide makes it easy to set up multiparty calls.
- Record and listen to your meetings with an SD memory card.
- Optional expansion microphones can be added for larger conference rooms.
- Optional wireless headset or PA system can be connected.
- Can be upgraded with smart features, making it future-proof.
- 2-year warranty

If you want to connect your Cellular Phone directly to the Konftel Conferencing Phone you will need the [Blackberry Cable](#), [iPhone Cable](#), or the [GSM Cellular Cable](#).

For some free advice on how you can implement the Konftel 300 in your organization contact Telco Depot by phone at 1 800 390 1200, via email at info@Telcodepot.com, or via our website at [Http://www.Telcodepot.com](http://www.Telcodepot.com)
