

## **DELTA WAVE's ISATPHONE PRO iFLY™ TURNKEY PACKAGE**

***This Turnkey Package Includes Everything For Quick and Easy Deployment For Fixed Or Portable Applications. The Rugged iFly™ Fixed Package Takes The Hassle Out Of Installations.***

### **Product Description**

The iFly Industrial Package was designed for quick and easy deployment. It is a turnkey package which incorporates Beam's ISatDOCK Pro, and external antenna which also incorporates GPS. All is contained in a watertight NEMA enclosure with handle for ease of transport and quick installation in indoor or outdoor environments. The unit also works with Inmarsat's "505" emergency alert service, providing location data.

A 30' coax cable set is Included, which should satisfy most installation requirements. All connections pre-wired to TNC and SMA bulkhead connectors on the outside of the case for GPS location acquisition and access to Inmarsat's GPS Network. The kit also includes a corded and cordless handset system that connects to the bulkheaded RJ11 port on the outside of the box. Compatible with PBX or Key Systems. A cordless handset system is also included to offer increased versatility. The unit also supports a Bluetooth headset.

The bulkheaded USB data port offers e-mail and internet connectivity at speeds of up to 4.8kbps. Can be used in conjunction with enhanced e-mail packages such as Amos Connect or Skyfile, with up to 90% data compression. Additionally, we include a USB extender. This lets you locate the device up to 150 ft. from your computer via low loss Cat-5/5e/6 cable. Contact information may be synchronized with Microsoft Outlook.

This complete plug and play package does not require technical expertise to install. It is a cost-effective alternative to the basic ISatPhone Pro with Dock unit, as it saves installation time and material.

Part Number: DWC-ASM-IFLY

Available Q2 2011

### **KEY FEATURES**
