Oxygen Software Introduces Oxygen Forensic Suite 2011 v.3.1 with Support for iPad 2

Apple iPad 2, Over 30 Android OS Smart Phones and Social Networking Forensics Tools Added in Recent Update Make Oxygen Forensic Suite 2011 the Ultimate Tool for Mobile Device Forensics

MOSCOW, Russia – March 18, 2011 – Oxygen Software, a leading provider of forensic software, today introduces Oxygen Forensic Suite 2011 v.3.1, a major update of the popular forensic software suite for Windows OS. Now the program supports revolutionary Apple® iPad 2, Apple® iOS 4.3, Apple® iTunes 10.2.1 and introduces preliminary support for iPhone 4 branded by AT&T and Verizon. Also the recent release adds support for over 30 Android® OS devices, 10 Windows Mobile OS devices and other new features and enhancements.

"iPad usage is growing exponentially and recently started sales of iPad 2 are expected to bring this popular gadget into the hands of even more people, making it a part of digital lifestyle in the home and office. In addition, Android has become the number one smart phone in the U.S., according to comScore and also promises to dominate in personal and business use on the global market by the end of this year. In response to these trends, Oxygen Software added support for iPad 2 and over 30 new Android handhelds. We're closely evaluating the evolution of various mobile devices, and we'll continue to expand the list of supported devices as new cell phones and smart phones appear on the market," commented Nickolay Golubev, Director of Public Relations, Oxygen Software.

What's New in Oxygen Forensic Suite 2011 v.3.1?

- iPad 2, iTunes 10.2.1, iOS 4.3, iPhone 4 are supported. Now forensic investigators can extract and review forensically important information from iPad 2, the next-generation of the world's most popular mobile gadget for browsing the web, playing games and watching videos. Besides, the new release adds support for the latest Apple® iTunes 10.2.1, Apple® iOS 4.3 and preliminary support for iPhone 4 by AT&T and Verizon.

- Social Networking Forensics. MySpace and Foursquare are added to the list of analyzed applications. Now investigators can retrieve and review user data related to these applications, such as installation and run time stamps, logins, user passwords and account details like photos, addresses, relatives, friends and more.

- More than 30 Android OS devices have been added to the list of 1900 supported handhelds, letting forensic experts extract all data, including phonebook, calls, messages, calendar event, camera shots and documents. Also new to this release is OxyAgent for Android OS smart phones, support for File Browser for Android OS devices with convenient browsing and filtering options and enhanced support for Android OS v.2.2.

- 10 new Windows Mobile OS devices are supported. In addition to all standard extraction capabilities, the program can extract forensic data from "locked" smart phones, retrieve messages from custom folders, extract emails and attachments along with full message headers with information on message routing.
