# About Triad Semiconductor

- **World's leading provider of via configurable array (VCA) solutions**
- **Mixed signal ASICs – *only better***
  - Lower development costs
  - Fastest possible time to profits
  - Significantly reduced risk
  - Any production volume

<b>Markets</b>	<b>Aerospace &amp; Defense</b>	<b>Industrial</b>	<b>Medical</b>	<b>Power/Energy</b>	<b>Consumer</b>
<b>Drivers</b>	Size, Weight, Power SWaP+Cost	Long-term Supply, ROI	SWaP+Cost High Performance	Integrating Micros High-Voltage & Analog	Cost, Risk, Time-to-\$
<b>Applications</b>	RADAR, Guidance, UAV, Munitions, Rad-Hard, Satellites, Obsolescence, Secure Comm, FPGA+Analog replacement	RS485, RS232, High Voltage ASICs, Sensor Fusion, Gas, Pressure, Humidity Detectors, Precision Analog + 32-bit Processors	Pulse Oximetry, Implantables, Neuro- Stim, Glucose Monitors, Smart Patient Monitors, Heart Rate, Fitness	Servers, Data Centers, Solar Inverters, Hand- Held Devices, Analog Sweep-Up ASICs, LED Lighting	Cell Phones, Tablets, Toys, Netbooks, 3DTV, 3D Gaming, Human- Interface

# The Problem with ASICs – Triad’s Solution

- **Traditional Full-Custom ASIC Design**
- **Expensive, Slow, Risky**

Full custom development costs

\$1,500,000

\$2,500,000

\$2,300,000

\$2,000,000

Zero - \$50K

VCA costs

\$400,000

The VCA Advantage

To Market a Year Earlier

Save Millions

Easy, Fast Changes

- **Via Configurable Array Design**
- **Affordable, Fast, Safe**

# Triad's VCA Technology, Solutions, & Benefits

- The Low Cost, Low Risk, Fastest way to develop a mixed signal ASIC for any production volume

- Single via mask layer processed at the foundry against staged wafers resulting in prototypes in 4 weeks
- Configuration vias automatically placed in a single mask layer configures and connects all resources
- Resources overlaid with a global routing fabric
- Tiles arranged in via configurable arrays containing analog, digital and memory resources
- Full-custom / high-performance IP assembled into via configurable tiles
- High-performance analog & mixed-signal ASIC & IP development team & fabless silicon provider

6-month development

Industry's lowest NRE

Silicon Proven IP

# About Kaben Wireless Silicon

- **A world class team of industry-hardened, experienced engineers specializing in mixed signal and radio system architecture for the last 10 years.**
- **Industry-recognized, IP foundation for wireless, wireline and optical applications. At the heart of our systems, we employ our patent-protected, core technologies**
  - $\Delta\Sigma$ -Fractional-N Frequency Synthesizers
  - Tunable, on-chip (SAW-like) filters
  - Data Converters (ADCs & DACs)
- **Recent industry trends have pushed us to develop wideband technology**
  - Wideband tunable filters and high dynamic range ADCs, that can work on lower supply voltages
- **Latest accomplishments and/or developments for Tier 1 companies**
  - Ultra-robust FM radio for harsh environments – uses our filter technology
  - Programmable, low-jitter timing products – uses our synthesizer technology
  - Tunable, wideband on-chip filter for wireless infrastructure – uses our wideband filters
  - All-Digital PLL based synchronization development – uses our next generation synthesizers
  - High-resolution Analog Front End – uses our filter technology and data converters

# Kaben & Triad means wireless/RF for everyone

- Kaben synthesizer technology → Can apply crucial optimization
- Kaben tunable filter technology → Custom made for any application
- Kaben Wireless & Wireline solutions → Product enhancement migration path

No trade offs → we crest the power/performance curve

- *Any Volume* ASIC solutions are now economical and accessible → perfect for proprietary products
- Clients have expressed an overriding desire to obtain a time-to-market advantage → Kaben-Triad VCA rapid prototyping facilitate this.
- Risk Mitigation → Changes are fast and inexpensive

## Applications the fit well – Now Configurable

- FM/AM Radio Tuners
- GPS
- Satellite Receivers
- DVB -x/x2 TV Tuners
- UWB
- WLAN 802.11a/b/g/h/n
- WiMAX 802.16a, 3GPP/LTE
- Multimode Cellular/Basestation
- IEEE1588, SynchE, ToP
- Timing Products that need Jitter Attenuators/XO/VCXO
