

**Keep track of BlackBerry® applications becoming free or dropping in price with App Stalker – Brand new and unique for BlackBerry® Smartphones.**

*App Stalker for BlackBerry® Smartphones is the ultimate tool for keeping track of apps that recently have become available for free or have dropped in price. This application runs silently in background, is easy to use and available for free.*

Hong Kong, (PRWeb) March 23<sup>rd</sup> 2011 – Android and Apple Smartphone users already have applications that allow them to search for free applications or applications that have dropped in price. However, an application for BlackBerry® Smartphones providing a similar service did not exist, until now.

S4BB Limited, nominee at the *Global Mobile App Awards 2011*, developed a free to download money saver; “App Stalker”. This unique application allows BlackBerry® users to “stalk” apps on BlackBerry® App World™ that have dropped significantly in price or gone from paid to free.

App Stalker is an app that runs in background and integrates fully with the BlackBerry® OS by showing little notification icons in the notification bar whenever a new app has been found. Thanks to it’s built in Twitter feature, searching and sharing apps was never as easy as now. As a bonus feature, its users can customize colors and font size to their own preferences.

All current BlackBerry® models running BlackBerry® OS 5.0 and higher are compatible with App Stalker. This includes the brand new BlackBerry® Torch™ 9800, BlackBerry® Bold™ 9780, BlackBerry® Style™ 9670, BlackBerry® Storm2™, BlackBerry® Curve™ 3G 9300, 9330.

App Stalker is available for free on BlackBerry® App World™, as well as directly on [www.s4bb.com](http://www.s4bb.com). For additional information about App Stalker, please contact S4BB Limited or visit <http://appworld.blackberry.com/webstore/content/29283>

About S4BB Limited:

S4BB Limited is a Hong Kong-based company, specializing in the development of mobile applications. Its market-leading BlackBerry® products cover nearly all aspects of what is possible on a mobile device. It provides software for the world-wide mobile market, such as games, productivity applications, administration tools, mobile communication products, as well as desktop applications for preparing data for your mobile device.
