

Neustar[®] SiteProtect

SiteProtect | Because DDoS Attacks are a When, Not an If

It's a Dangerous World Out There

Fact: There are 7,000 Distributed Denial of Service (DDoS) attacks every day. And that number is growing rapidly. What's alarming is that 74% of organizations surveyed have experienced a DDoS attack in the last year, so you don't have to be WikiLeaks or Twitter to wind up in the crosshairs. Increasingly, companies of all sizes and in all industries are feeling the pain.

The SiteProtect Difference

- More firepower. With a large 160Gbps+ global mitigation network behind it, SiteProtect repels attacks rapidly and closer to the source, no matter where they are launched from.
- More cost-effective. Because SiteProtect is cloud-based, there's no capital investment in equipment or in-house expertise.
- A proven reputation. Combined with Neustar UltraDNS, customers have one of the industry's strongest protection bundles available, defending both their DNS & their website.

Why You Need It Now

- The average DDoS attack lasts from 2 to 6 hours and can cripple your public-facing infrastructure. Can you afford to lose thousands or even millions of dollars in revenue through down time or damage to your brand?
- This kind of total defense is not only a best practice, it's mandated by many corporate governances, plus laws like Gramm-Leach-Bliley Act (GLBA) and Sarbanes-Oxley (SOX).

How SiteProtect Works

- When an attack hits, simply activate SiteProtect through a quick DNS change in the UltraDNS management portal or convenient mobile application. You make the call and stay in command.
- Your traffic will be redirected through our global scrubbing centers, leaving only clean traffic flowing to your web servers...and peace of mind flowing back through your organization.

What It Is

- The leading cloud-based DDoS mitigation service
- Defense against DDoS attacks BEFORE they reach your infrastructure
- Protection for all HTTP and HTTPS traffic, regardless of type and size of attacks
- Global coverage through our network of traffic scrubbing centers
- A powerful alternative to traditional hardware or bandwidth solutions
